1

Introduction

1.1 What is the Hilton Transaction Exchange?

The Hilton Transaction Exchange (HTE) is a web service that customers can use to perform business functions with Hilton. Using this service, client applications can get the same type of information and perform the same types of tasks that are available today through Global Distribution Systems (GDS) or websites such as <http://www.hilton.com>. Using the infrastructure of the internet provides core search and reservation functionality for all hotels in the Hilton Family of Brands. The Hilton Family of Brands includes Hilton, Conrad, Doubletree, Hampton, Hilton Garden Inn, Embassy Suites, Homewood Suites by Hilton, the Waldorf=Astoria Collection, Tapestry Collection, Canopy, Curio, Home2, and Tru. By exchanging information with the Hilton Transaction Exchange, customers can build applications that perform business functions such as searching for and booking hotel rooms, getting information about a hotel, checking room rates and availability, and canceling, modifying or retrieving a reservation.

Because the Transaction Exchange is built on open standards, customers can leverage the existing skills of their IT organization when developing client applications. In addition, the prospect of reuse is much greater, compared to a proprietary solution. The OpenTravel™ Alliance (OTA) has defined an industry standard that enables travel-related systems to conduct business with each other. The transactions that are provided by the Hilton Transaction Exchange are a subset of those defined in the OTA specification. The messaging and protocol layers also use standards-based technologies.

1.2 About the Developer's Guide

The purpose of this document is to communicate the set of instructions, guidelines and technical information needed to interact with the Hilton Transaction Exchange. This is a programmer's guide. The reader should be familiar with the underlying technologies used, including XML, HTTPS and SOAP. A Web Services Definition Language (WSDL) for HTE v3.0 has been provided to assist in development of XML code. Documentation on using the WSDL can be found in [Chapter 13](#).

In this document, XML schemas are shown three ways. Schema diagrams show the hierarchical structure of the XML from left to right. Schema information in table format is more detailed. The table columns are:

- Level – the depth of the element in the XML structure, starting with 0 as the highest-level element.
- Name – the name of the element or attribute. Attributes use the convention `@name`.
- Type – the data type of an attribute.
- Occurs – the number of times an element should exist in an XML file.
- Required – if an attribute is required or not. If it is listed in the table and is not required, then it is an optional attribute.
- Comments – additional specific element/attribute information.

The third way in which XML data is shown is as simple text, which is used mainly for examples of XML requests and responses. *Examples are for illustration only. Any rates, hotel codes, distances, addresses or other information in the examples should not be considered accurate.*

1.3 Customer Registration

Before using the Transaction Exchange, customers must register with Hilton. You will either receive a registration form by email or be directed to a link where a form may be completed and returned. After the registration process is complete, you will have these items associated with your account:

- Requestor ID – a unique identifier based on your company name
- Username – a ‘login’ name for authentication
- Password – the password for the assigned Username

When sending requests to the Hilton Transaction Exchange, these values *must* be populated in various fields of the XML.

During the registration process you will need to provide us with the range of IP addresses from which you will be connecting to our servers. We will have to add these IP addresses to our firewall. This process usually takes around 5-7 business days.

1.4 Technical Support

Please refer to the Production Support guidance on our Developer Portal and route your request accordingly. [Production Support | Hilton Dev Portal for documentation](#)

1.5 Features

The Hilton Transaction Exchange allows developers to make sophisticated applications that can:

- Search for hotels around cities or other geographical locations.
- Check the availability of a particular hotel for a specific date range.
- Get room rate information for a hotel.
- Obtain a hotel’s address, contact information and amenities
- Reserve a hotel room for a customer
- Modify an existing reservation
- Cancel an existing reservation
- Obtain client-specific rates and special rate plans
- Retreive an existing reservation

2

Messaging Protocol

2.1 Call Semantics

The Hilton Transaction Exchange is an interactive application meant for web-based clients. Messages are sent by the client via an HTTPS POST. The Hilton Transaction Exchange receives the message, performs the business tasks and responds back to the client immediately.

In distributed processing terms, each message sent uses a Type A delivery mechanism. This type of messaging is used for the expedient delivery of interactive messages, generally in the form of request/response pairs. As far as the client is concerned, Type A messages have “at-least-once” call semantics, meaning the messages are idempotent. The server does not keep the requests or the responses and does not use a “store-and-forward” model.

2.2 Standards Compliance

The following standards are supported by the Hilton Transaction Exchange:

- OpenTravel™ Alliance (OTA) 2004B specification
- Simple Object Access Protocol (SOAP) 1.1
- HyperText Transfer Protocol (HTTP) 1.1
- Transport Layer Security (TLS) 1.2
- Extensible Markup Language (XML) 1.0

All communications performed will be transmitted over a secure connection. Specifically, the HTTPS wire protocol is used to transport SOAP formatted XML messages carrying an OTA payload.

2.3 SOAP

According to the SOAP specification, all SOAP messages contain an envelope which in turn contains a header and a body. The header consists of communication information while the SOAP body contains the primary content of the message. In using the Hilton Transaction Exchange, the body contains the OTA XML message. See <http://www.w3.org/TR/2000/NOTE-SOAP-20000508/> for more information on the SOAP 1.1 specification.

Here is an example of a SOAP message:

```
<?xml version="1.0" encoding="UTF-8"?>
<soap-env:Envelope xmlns:soap-env="http://schemas.xmlsoap.org/soap/envelope/">
    <soap-env:Header>
        { Header data goes here }
    </soap-env:Header>
    <soap-env:Body>
        { Body data goes here }
    </soap-env:Body>
</soap-env:Envelope>
```

Note that the value for “xmlns:soap-env” is only an example and may be different based on the SOAP engine used to parse SOAP envelopes.

2.3.1 SOAP Header

The SOAP header has two attributes: Actor and MustUnderstand. They are *not* used by the Hilton Transaction Exchange, but a SOAP header containing these attributes will be accepted.

The following diagram shows the structure of the Hilton Transaction Exchange's SOAP Header used by Hilton.

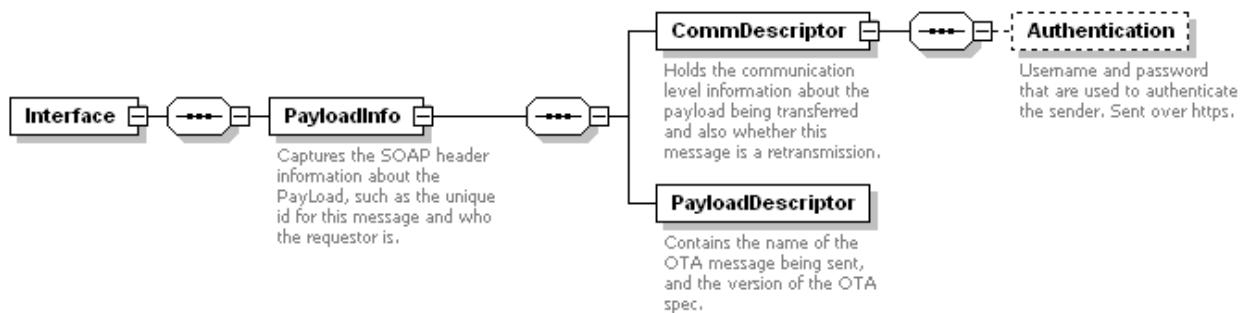

Figure 1. SOAP Header XML Structure

The attributes of the SOAP header are listed in the following table.

Table 1. SOAP Header Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	Header		1	Y	
1	Interface		1	Y	
	@xmlNs	URI		N	The xmlns attribute should be http://www.hilton.com/ota/header .
	@Name	xs:string		N	The value of this attribute is “HiltonTransactionEngine”.
	@Version	xs:string		Y	The value of Interface@Version is the version number of this interface, which is “3.0”.
2	PayloadInfo		1	Y	
	@RequestId	xs:string		Y	The RequestId attribute is an identifier generated by the <i>originator</i> of the message. It is used to track messages and should be unique to <i>your</i> application.
	@RequestorId	xs:string		Y	For a request message (OTA “RQ” messages), the @RequestorId attribute is a Hilton-assigned value, which is tied to your company.
	@ResponderId	xs:string		Y	ResponderId should always be “Hilton”.
3	CommDescriptor		1	Y	
	@Sourceld	xs:string		Y	Sourceld is the name of <i>your</i> application. The combination of CommDescriptor@Sourceld and PayloadInfo@RequestId represent a unique identifier for each message received by the Hilton Transaction Exchange.
	@DestinationId	xs:string		Y	Should always be “HiltonTxnEngine” in the request. You should populate Sourceld and DestinationId in your requests. The header of the response message will also have these two attributes populated, but the values will be reversed: the Sourceld will be “HiltonTxnEngine” and the DestinationId will be the name of your application.
	@RetryIndicator	xs:boolean		N	A client may issue a request more than once if the response to the first call is lost in transmission, but the @RetryIndicator attribute in the SOAP header, must be set to true when retransmitting. Otherwise, the message will be received and processed a second time. For instance, if a client sends a message to the Hilton Transaction Exchange in order to book a room, and the response (including the

Table 1. SOAP Header Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
					confirmation number) is not received by the client, a second message can be sent to book the room, but the <i>RetryIndicator</i> attribute should be “true”. Otherwise, a duplicate reservation may be made. The <i>@RetryIndicator</i> should be set to true when a message is a re-transmission of a previous message. The <i>@RetryIndicator</i> is only used in an OTA_HotelResRQ.
4	Authentication		1	Y	The Authentication element contains your Hilton-supplied username and password.
	<i>@Username</i>	xs:string		Y	Supplied by Hilton. Required only for SOAP requests, not responses.
	<i>@Password</i>	xs:string		Y	Supplied by Hilton. Required only for SOAP requests, not responses.
3	PayloadDescriptor		1	Y	PayloadDescriptor has business-level information about the payload being transferred.
	<i>@Name</i>	xs:string		Y	Name of the OTA message being sent in the body.
	<i>@Version</i>	xs:string		N	The Version attribute is the version of the OTA spec being used. The value is “2004B”.

This example of a SOAP header shows a request from 123 Travel Agency to the Hilton Transaction Exchange. The header indicates that the payload contains a request for an availability check.

```

<SOAP-ENV:Header>
  <Interface xmlns="http://www.hilton.com/ota/header" Name="HiltonTransactionEngine" Version="3.0">
    <PayloadInfo RequestId="1" RequestorId="123TravelAgency" ResponderId="Hilton">
      <CommDescriptor SourceId="123TrvBookingEngine" DestinationId="HiltonTxnEngine" RetryIndicator="false">
        <Authentication Username="123ta001" Password="blue038" />
      </CommDescriptor>
      <PayloadDescriptor Name="OTA_HotelAvailRQ" Version="2004B" />
    </PayloadInfo>
  </Interface>
</SOAP-ENV:Header>
```

One possible response header for this request is:

```
<SOAP-ENV:Header>
<Interface xmlns="http://www.hilton.com/ota/header" Version="3.0" Name="HiltonTransactionEngine">
    <PayloadInfo RequestId="1" RequestorId="Hilton" ResponderId="123TravelAgency ">
        <CommDescriptor SourceId="HiltonTxnEngine" DestinationId="123TrvBookingEngine "/>
        <PayloadDescriptor Version="2004B" Name="OTA_HotelAvailRS"/>
    </PayloadInfo>
</Interface>
</SOAP-ENV:Header>
```

2.3.2 SOAP Body

The SOAP body for a request message contains the OTA message, as shown in the following example:

```
<soap-env:Body>
  <OTA_HotelResModifyRQ xmlns:"http://www.opentravel.org/OTA/2003/05">
    { OTA XML message goes here }
  </OTA>
</soap-env:Body>
```

If there are SOAP errors, the body will contain the faults. See section [2.6.2](#) for a discussion of SOAP errors.

2.4 HTTPS

The Hilton Transaction Exchange uses the HTTPS wire protocol as the transport layer that carries the SOAP messages. Although SOAP might be used in conjunction with a variety of HTTP request methods, the SOAP 1.1 specification only defines SOAP within HTTP POST requests.

The HTTPS response will follow the semantics of the HTTP status codes. For instance, a 200 status code indicates that the request was received and understood while a 404 response means that the URL was not found. Errors are explained in the next section. For the list of HTTP 1.1 status codes, see <http://www.w3.org/Protocols/HTTP/HTRESP.html>.

HTTPS applications must use the media type “text/xml” when sending or receiving SOAP messages. The POST URL must point to /ota/OTA.pl.

An example of an HTTPS request header is:

```
POST /ota/OTA.pl HTTPS/1.1
Content-Type: text/xml; charset="UTF-8"
Content-Length: 1234
SOAPAction: ""
```

An example of a successful HTTPS response header is:

```
HTTPS/1.1 200 OK
Content-Type: text/xml; charset="UTF-8"
Content-Length: 1234
```

2.5 Transport Layer Security (TLS) and Certificates

As stated in the previous section the transactions are only available via Transport Layer Security v1.2 (TLS) protocol. HTE’s certificates are signed by Verisign. Browsers typically already have Verisign’s root certificates installed in them so no warnings are received about certificate validation. In order to prevent client applications from getting an error on certificate validation, Verisign’s root certificate must be installed in the TLS library being used for client development. Verisign’s root certificate can be obtained from the following URL:

<http://www.verisign.com/support/roots.html>.

2.6 Errors

2.6.1 HTTPS Errors

Because the Hilton Transaction Exchange uses HTTPS as the transport mechanism, responses are sometimes HTTP errors, represented by the 4xx and 5xx error codes.

This example of an HTTPS response signifies an HTTP 404 error:

```
HTTPS/1.1 404 Not Found
Content-Type: text/xml; charset="UTF-8"
Content-Length: 1234
```

Another example of an unsuccessful HTTPS response header is:

```
HTTPS/1.1 500 SOAP Fault
Content-Type: text/xml; charset="UTF-8"
Content-Length: 1234
```

If there is a SOAP error while processing a request (as shown in the previous example), the SOAP HTTPS server will issue an HTTP 500 “Internal Server Error” response. A SOAP message containing a SOAP Fault element will be included in the response. See the next section for more details about SOAP errors.

2.6.2 SOAP Errors

If a SOAP error occurs during processing, the SOAP body contains a SOAP Fault element. (If there are no SOAP errors, the Body will contain the OTA response. See section [2.3.2](#).)

The Fault element contains the error information, as shown in the following diagram.

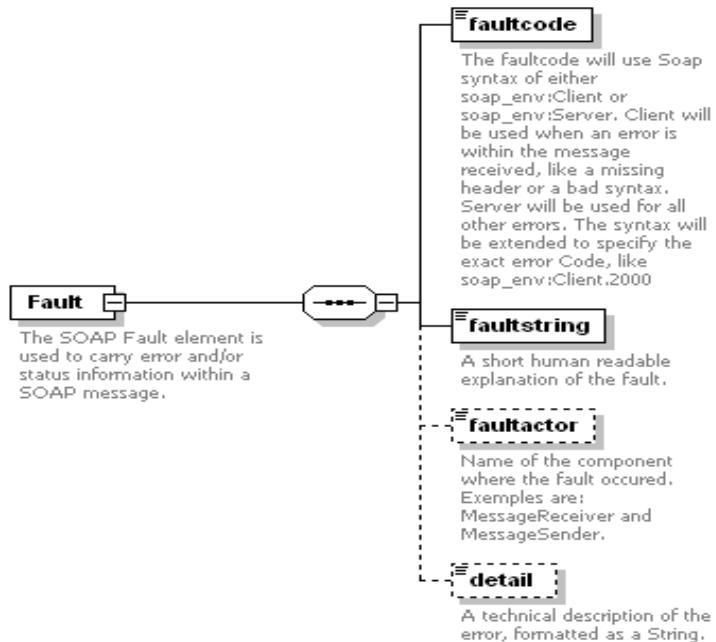

Figure 2. SOAP Fault XML Structure

The elements inside the Fault element are listed in the following table:

Table 2. SOAP Fault Elements and Attributes				
Level	Name	Type	Occurs	Required
0	Body		1	Y
1	Fault		1	Y
2	faultcode		1	Y
2	faultstring		1	Y
2	faultactor		1	N
2	detail		1	N
3	text		1	Y

Note that the Fault element can only appear once in a SOAP message, therefore only the *first* error encountered is reported. SOAP faults are divided into two categories: Client and Server. Client faults will be used when an error is due to invalid or missing data sent by a client. All other errors are Server errors. Server errors will all have a code of 2100, but the accompanying faultstring attribute will contain a detailed description of the specific server error. The SOAP faults that can occur are:

Table 3. SOAP Fault Codes and Messages	
Faultcode	Faultstring
2000	Missing Header
2001	Malformed XML
2002	Invalid Interface Name
2003	Unsupported Interface Version
2004	Invalid namespace
2005	Unsupported OTA Transaction in PayloadDescriptor
2006	Invalid DestinationId
2007	Authentication Error – Invalid Username
2008	Authentication Error – Invalid Password
2100	Server Error
3000	Data Error In The OTA Message

The following is an example of an Invalid Username fault:

```
<soap-env:Body>
<soap-env:Fault>
<faultcode>soap-env:Client.2008</faultcode>
<faultstring>Authentication Error – Invalid Username</faultstring>
</soap-env:Fault>
```

```
</soap-env:Body>
```

This is a response that shows an error caused by malformed XML in the request:

```
<SOAP-ENV:Body>
  <SOAP-ENV:Fault>
    <faultcode>2001</faultcode>
    <faultstring>Invalid Header</faultstring>
    <faultactor>Hilton.HeaderValidator</faultactor>
    <detail><text>Missing or Incorrect DestinationId Attr From CommDescriptor Ele-
ment</text></detail>
  </SOAP-ENV:Fault>
</SOAP-ENV:Body>
```

3

Messaging Content

3.1 Overview

The OTA is a consortium consisting of approximately 150 member companies from all sectors of the travel industry. It is comprised of several working groups, each focusing on a different aspect of the travel sector – Air, Hotel, Car etc. The goal of the OTA is to promote electronic commerce in the travel sector. In order to reach this goal, they have developed a set of specifications so that businesses can more easily share information. The transactions that are provided by the Hilton Transaction Exchange conform to OTA specifications.

3.2 XML

The OTA has chosen Extensible Markup Language (XML) as the data format for their specifications. They have XML Schema Definition (XSD) files available for each transaction in the specification. The Hilton Transaction Exchange complies with the 2004B version of the OTA specification, which is available on their website: <http://www.opentravel.org/2004B/>. The OTA-defined XML message is included in the SOAP body.

For flexibility, the XML schemas contain only minimal restrictions. In some cases, the Hilton Transaction Exchange has attributes that are needed in order to complete the business task being requested. In this document, for each transaction supported by the Transaction Exchange, the required attributes are listed in the corresponding table of XML elements and attributes. Note that *the OTA schema definitions may not have defined these attributes as “required”*. In this case, the request will be validated by the XSD, but will not be sufficient for completing the transaction. If an attribute is required by the Transaction Exchange, and it is missing, an appropriate error will be generated and included in the SOAP response.

4

Supported Transactions

The Hilton Transaction Exchange supports the following OTA request (RQ) and response (RS) schemas:

Table 4. Hilton Transaction Exchange Supported Transactions	
OTA Schema Pair	Purpose
OTA_HotelAvailRQ/RS	Check the availability of hotels based on date ranges, room types, etc. The results include rate information.
OTA_HotelSearchRQ/RS	Find all hotels within a radius of a location.
OTA_HotelResRQ/RS	Make a reservation.
OTA_HotelResModifyRQ/RS	Modify an existing reservation.
OTA_HotelDescriptiveInfoRQ/RS	Provides detailed descriptive information about a hotel property.
OTA_CancelRQ/RS	Cancel an existing reservation.
OTA_ReadRQ/OTA_HotelResRS	Retrieve information about a booking.

Chapters 5 through 12 describe each schema pair which includes examples, use cases, and the XML attributes and elements that are supported by the Hilton Transaction Exchange.

4.1 Common Elements

4.1.1 Root Element

All OTA messages share a common root element. The attributes of this element are shown in the following table.

Table 5. Root Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	Root		1		
	@xmlns	xs:string		Y	The value of xmlns should always be http://www.opentravel.org/OTA/2003/05 .
	@TimeStamp	xs:dateTime		Y	The TimeStamp attribute indicates the creation date and time of the message in GMT format. The format is YYYY-MM-DDThh:mm:ss.ss[+ -]hh:mm. It signifies a Greenwich Mean Time (GMT) value, plus or minus an offset. So, for Eastern Standard Time, the offset would be GMT minus 5 hours,

Table 5. Root Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					and the end of TimeStamp would be “-05:00”. It signifies the time the message was sent.
	@Target	xs:NMTOKEN		Y	Must be either “Test” or “Production”.
	@Version	xs:decimal		Y	3.0
	@PrimaryLangID	xs:language		N	Optional. The only supported value is “en-us”.

Below is an example of an OTA_HotelAvailRQ message that was sent March 5, 2008, at 8:20 GMT.

```
<OTA_HotelAvailRQ xmlns="http://www.opentravel.org/OTA/2003/05"TimeStamp="2008-03-05T08:20:45.715-06:00" Target="Production" Version="3.0" PrimaryLangID="en-us" >
    { sub-elements go here }
</OTA_HotelAvailRQ>
```

4.1.2 Success, Warning and Errors Elements

The response messages (OTA messages whose names end in “RS”) will always return either a Success element or an Errors element. The Success element has no attributes. If the element is present, then the transaction was successful. You will see the tag “<Success/>” in the response as shown below.

```
<OTA_HotelAvailRS xmlns="http://www.opentravel.org/OTA/2003/05" Target="Production" PrimaryLangID="en-us" Version="3.0"TimeStamp="2008-03-05T08:20:31.55-06:00"><Success/>;
</OTA_HotelAvailRS>
```

If the Errors element exists, it will include one Error sub-element. Only the first error generated by the Transaction Exchange will be returned. Please reference [Appendix F](#) to see a list of possible errors and their meanings. The Type attribute contains the OTA Code List Error Warning Type (EWT). The Transaction Exchange will always return one of the error codes from this list. It is included in [Appendix A, Table 3](#) of this document for convenience.

```
<Errors><Error Type="3">You are not authorized to view the following property :LONHI</Error>
</Errors>
```

The response could have Warning elements also. For instance, if a request is received that checks availability for a single property and there is no availability, the response will

have a Success element (because the transaction was successful) and also a warning saying there was no availability for that property as shown below.

```
<Warnings><Warning Type="3">WASDN:HOTEL NOT AVAILABLE</Warning></Warnings>
```

5

OTA_HotelSearch

The OTA_HotelSearchRQ/RS transaction is used to search for a list of hotel properties that meet specified search criteria. It is sometimes referred to as a “wide-area search”. Unlike OTA_HotelAvailRS/RQ, availability is not checked, so there is no need to pass in a date range. Rate information is not provided in the response. The information that is returned in the response is sufficient enough to be able to select a single hotel for subsequent transactions, such as checking availability and booking a room. It is also possible to obtain a list of *all* the properties available for all the Hilton brands by using this transaction. Shown below is a diagram of the OTA_HotelSearch request transaction used in the Hilton Transaction Exchange.

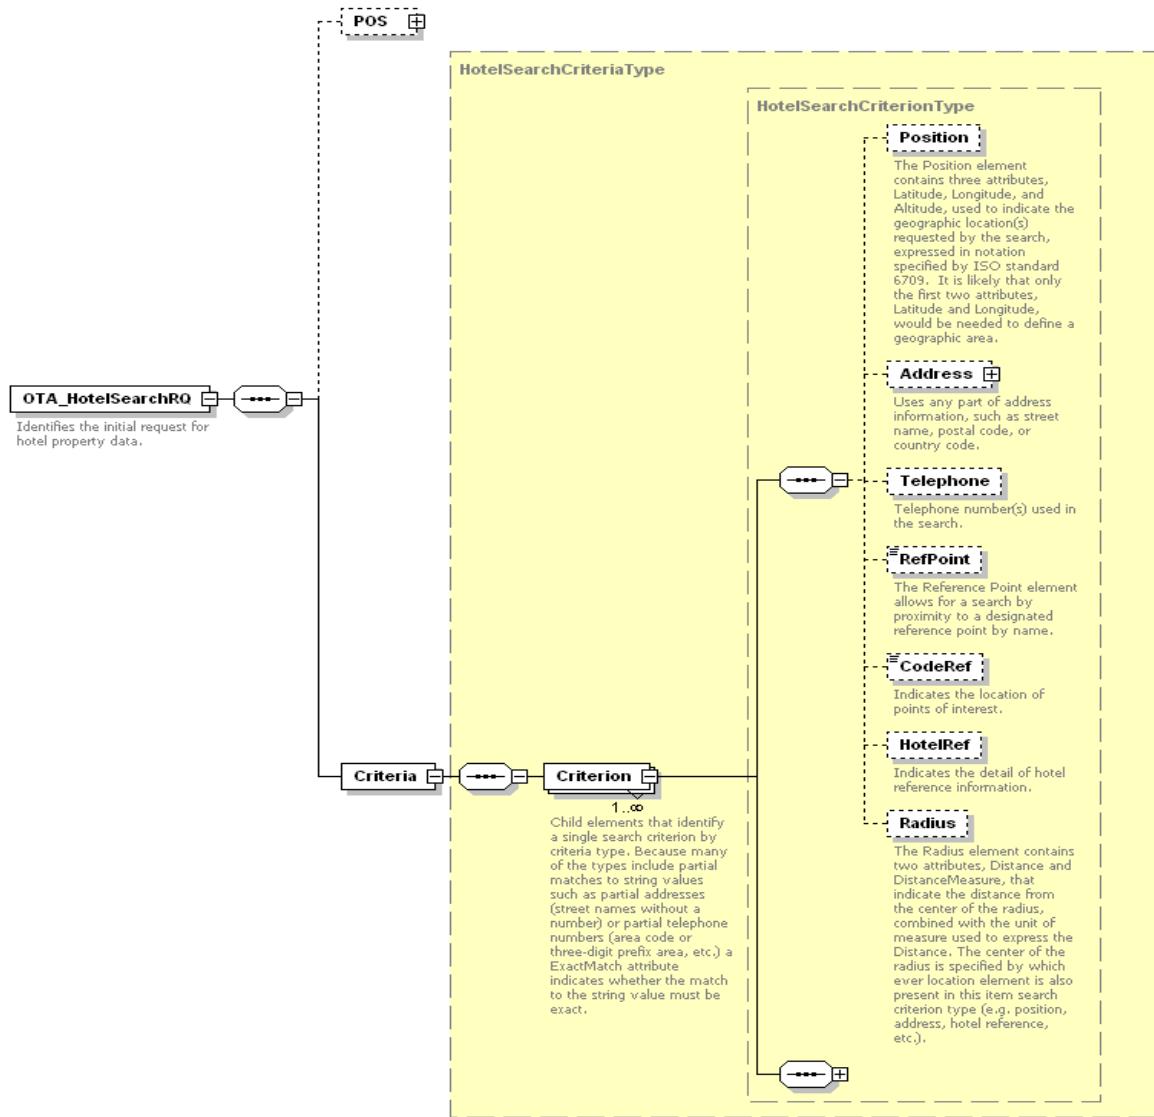

Figure 3. OTA_HotelSearchRQ Schema

5.1 OTA_HotelSearchRQ Elements and Attributes

The following table shows the attributes of the Criteria element that are supported by the Hilton Transaction Exchange.

Table 6. OTA_HotelSearchRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelSearchRQ			Y	
1	Criteria		1	Y	
2	Criterion		1	Y	
3	Position		0..1	N	The Position element contains a latitude and longitude and is for specifying the geographic center of the search. If the Position element is supplied, the latitude and longitude are required. The other way to specify a search location is by using the Address element.
	@Latitude	StringLength1to16		Y	
	@Longitude	StringLength1to16		Y	
3	Address		0..1	N	The OTA has defined two ways to use the Address element. The FormattedInd attribute of Address is used to specify whether or not the address is “formatted”. For the Hilton Transaction Exchange, this attribute is not used because it will always be assumed the address is <i>not</i> formatted. The difference lies in whether or not the StreetNmbr and BldgRoom sub-elements are used. When an address is formatted, the StreetNmbr and BldgRoom elements contain part of the street address. This is not how the server expects the data. In our case, we use an “unformatted” ad-

Table 6. OTA_HotelSearchRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					dress, meaning up to three AddressLine elements, containing free-form text, should be used to pass in the Address to be searched on. (Since the StreetNmbr and BldgRoom elements are not used, they are not listed in this table, even though they are part of the XML schema.)
4	AddressLine		0..3	N	
4	CityName		0..1	N	
4	PostalCode		0..1	N	
4	StateProv		0..1	N	
	@StateCode	StateProvCodeType		Y	
4	CountryName		0..1	N	
	@Code	ISO3166		Y	
3	CodeRef		0..1	N	To search for hotels around an airport, the CodeRef element should be used.
	@LocationCode	StringLength1to8		Y	The LocationCode is the 3-letter International Air Transportation Code (IATA) code. (See http://www.iata.org for more information on airport codes.)
	@CodeContext	StringLength1to32		Y	The value of the attribute CodeContext should always be "IATA".
3	HotelRef		0..1	N	The HotelRef element has the attribute BrandCode, which is used to search for a specific brand. See Appendix A, Table 2 for a list of Hilton-specific brand codes.
	@BrandCode	StringLength1to8		Y	Only one BrandCode element is allowed in the request. To retrieve the list of all properties in the Hilton corporate sys-

Table 6. OTA_HotelSearchRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					tem, the BrandCode attribute should be set to an asterisk ("*"). In this case, the Address, CodeRef and Radius should not be included. If they are, they will be ignored.
3	Radius		0..1	N	The Radius element is optional. If it is not present in the request, it will default to 20 miles.
	<i>@Distance</i>	Numer-icStringLength1to16		Y	The maximum search distance allowed is 50. The minimum distance allowed is 1. Only integers should be used.
	<i>@DistanceMeasure</i>	StringLength1to16		N	The DistanceMeasure attribute should either be "Mile" or "Km". Mile is the default.

5.2 OTA_HotelSearchRQ Examples

This is an example of a search for hotels around a specific geographic location, specified as a latitude/longitude using the Position element. The default search radius of 20 miles will be used.

```
<OTA_HotelSearchRQTimeStamp="2008-04-17T14:11:21.253" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
<Criteria>
    <Criterion>
        <Position Latitude="43.5942" Longitude="-116.178"/>
    </Criterion>
</Criteria>
</OTA_HotelSearchRQ>
```

This next example is a search for DoubleTree hotels within 50 kilometers of Topeka, Kansas.

```
<OTA_HotelSearchRQTimeStamp="2008-04-17T14:11:21.253" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
    <Criteria>
        <Criterion>
            <Address>
                <CityName>Topeka</CityName>
                <StateProv StateCode="KS"/>
                <CountryName Code="US"/>
            </Address>
            <HotelRef BrandCode="DT"/>
            <Radius Distance="50" DistanceMeasure="Km"/>
        </Criterion>
    </Criteria>
</OTA_HotelSearchRQ>
```

An example of a 20-mile search for hotels around a specific street address is below.

```
<OTA_HotelSearchRQTimeStamp="2008-04-17T14:11:21.253" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
    <Criteria>
        <Criterion>
            <Address>
                <AddressLine>600 Main St.</AddressLine>
                <CityName>Norfolk</CityName>
                <PostalCode>23523</PostalCode>
                <StateProv StateCode="VA"/>
                <CountryName Code="US"/>
            </Address>
        </Criterion>
    </Criteria>
</OTA_HotelSearchRQ>
```

This example is a search for hotels around the Toronto, Canada airport. The three-letter IATA airport code for this airport is "YYZ".

```
<OTA_HotelSearchRQ TimeStamp="2008-04-17T14:11:21.253" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
  <Criteria>
    <Criterion>
      <CodeRef LocationCode="YYZ" CodeContext="IATA"/>
    </Criterion>
  </Criteria>
</OTA_HotelSearchRQ>
```

The following example will return a list of all properties in all brands.

```
<OTA_HotelSearchRQ TimeStamp="2008-04-17T14:11:21.253" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
  <Criteria>
    <Criterion>
      <HotelRef BrandCode="*"/>
    </Criterion>
  </Criteria>
</OTA_HotelSearchRQ>
```

5.3 OTA_HotelSearchRS Elements and Attributes

The diagram below shows the OTA_HotelSearch response used by the Hilton Transaction Exchange.

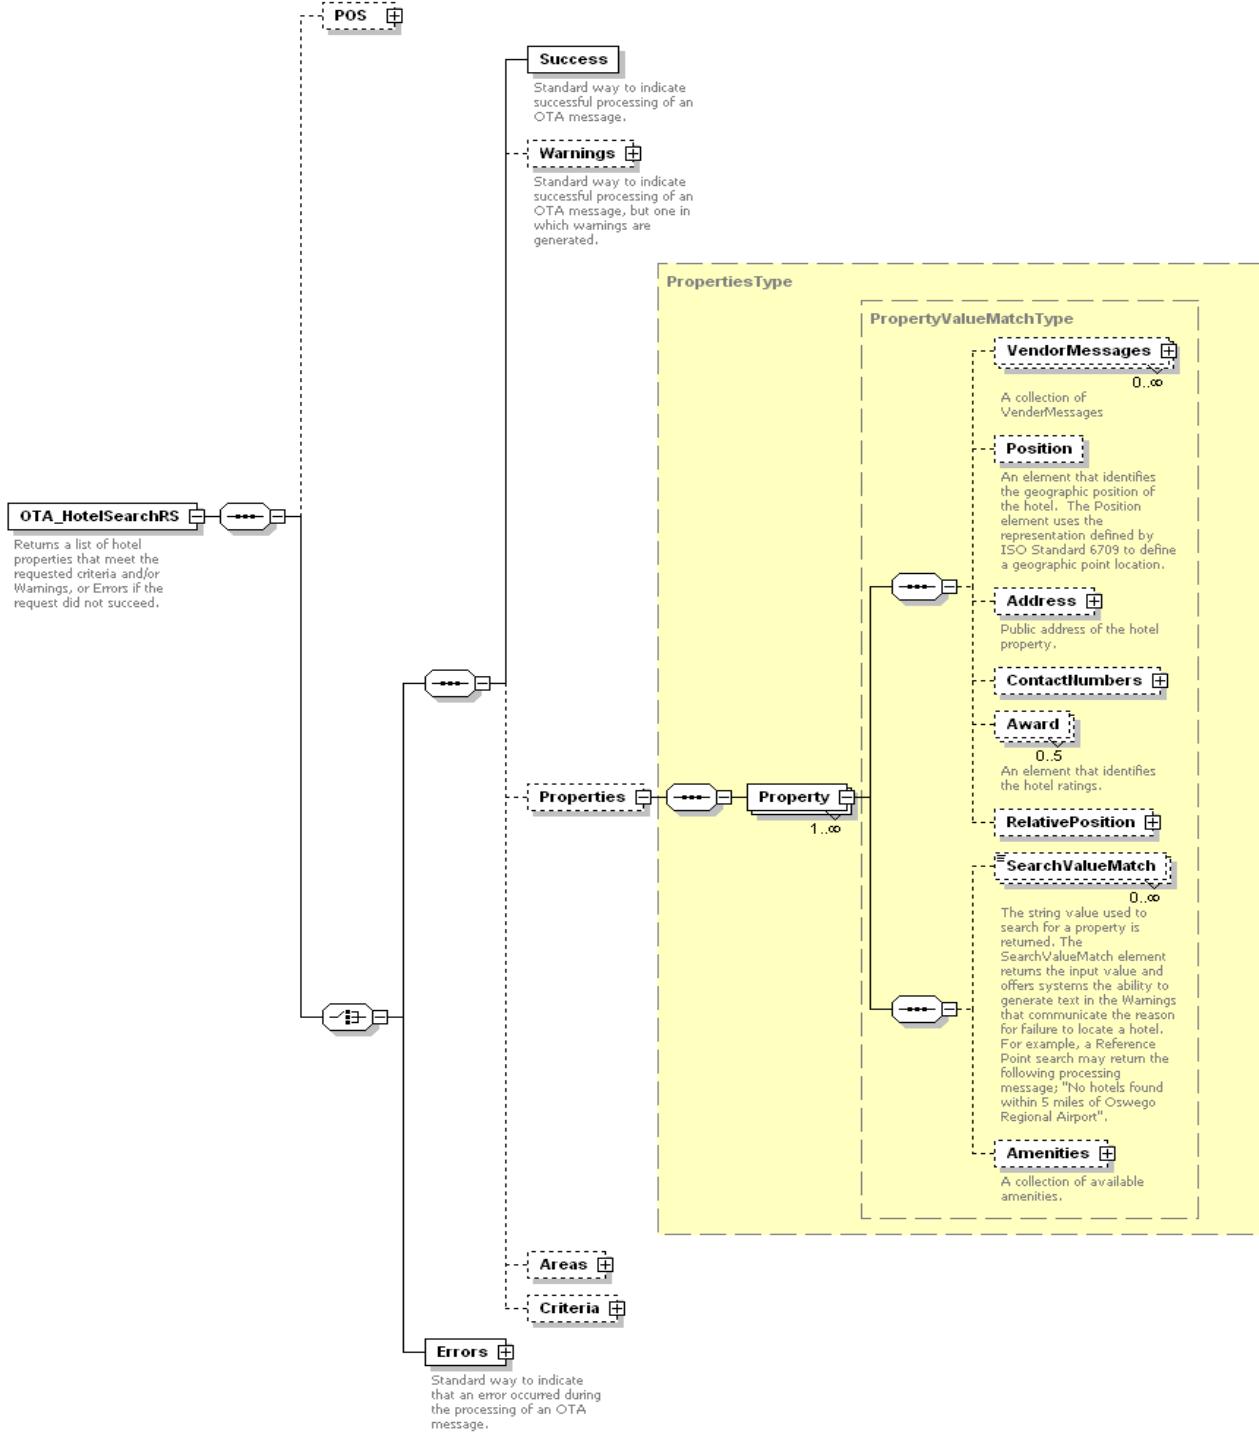

Figure 4. OTA_HotelSearchRS Schema

The following table shows the attributes of the OTA_HotelSearchRS elements that are supported by the Hilton Transaction Exchange.

Table 7. OTA_HotelSearchRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelSearchRS		1	Y	
1	Success		0..1	N	
1	Errors		0..1	N	See section 4.1.2 for more info on errors.
2	Error		1	Y	
	@Type	OTA_CodeType		Y	
1	Warnings		0..1	N	See section 4.1.2 for more info on warnings.
2	Warning		1	Y	
	@Type	OTA_CodeType		Y	
1	Properties		0..1	N	
2	Property		1..n	Y	A Property element is included in the response for each hotel that meets the search criteria. There will always be a BrandCode, HotelCode, and HotelName for each property returned.
	@BrandCode	StringLength1to8		Y	Two letter Hilton brand code. See Appendix A, Table 2 for a list of Hilton-specific brand codes.
	@HotelCode	StringLength1to8		Y	Five letter Hilton hotel code.
	@HotelName	StringLength1to128		Y	
3	Address		1	Y	For a discussion of the Address element, see Table 6 .
4	AddressLine		1	Y	
4	CityName		1	Y	

Table 7. OTA_HotelSearchRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
4	PostalCode		0..1	N	
4	StateProv		0..1	N	
	@StateCode	StateProvCodeType		Y	
4	CountryName		1	Y	
	@Code	ISO3166		Y	
3	ContactNumbers		0..1	N	If present, the ContactNumbers element will contain only one ContactNumber element, with the Phone-Number attribute populated. (Only one contact number is supplied for each hotel.)
4	ContactNumber		1	Y	
	@PhoneNumber	StringLength1to32		Y	
3	RelativePosition		0..1	N	The search criteria provided in the OTA_HotelSearchRQ request could have been a latitude and longitude, the name of a city, a street address, an airport, etc. The RelativePosition element contains the distance between the property and the requested search location.
	@Distance	xs:string		Y	
	@DistanceUnitName	DistanceUnitNameType		Y	DistanceUnit can be either "Mile", signifying miles or "Km" for kilometers. The DistanceUnit attribute will be consistent with the request, for instance, if you specify a 20 kilometer search radius, the distances of the properties to the center will be in kilometers.
1	Criteria		1	Y	Criteria and its sub-elements will contain the values that were passed to the Transaction Exchange in the OTA_HotelSearchRQ message, plus additional information. For instance, a request may not have included a Postion el-

OTA_HotelAvail

The OTA_HotelAvailRQ message is used to search for hotel rooms that are available for booking. Unlike OTA_HotelSearchRQ/RS, it returns availability and rate information. It is common for an OTA_HotelSearchRQ message to precede an OTA_HotelAvailRQ in order to obtain a list of eligible properties.

The OTA_HotelAvailRQ/RS messages are used to check:

- Availability of 1 to 25 properties.
- Availability for Smoking/Non-Smoking rooms or rooms that can accommodate an extra bed.
- Total price of stay.
- Rate changes over stay.
- All rate plans and room types are returned for a single property request.
- The lowest rate per property is returned for a multi property request.

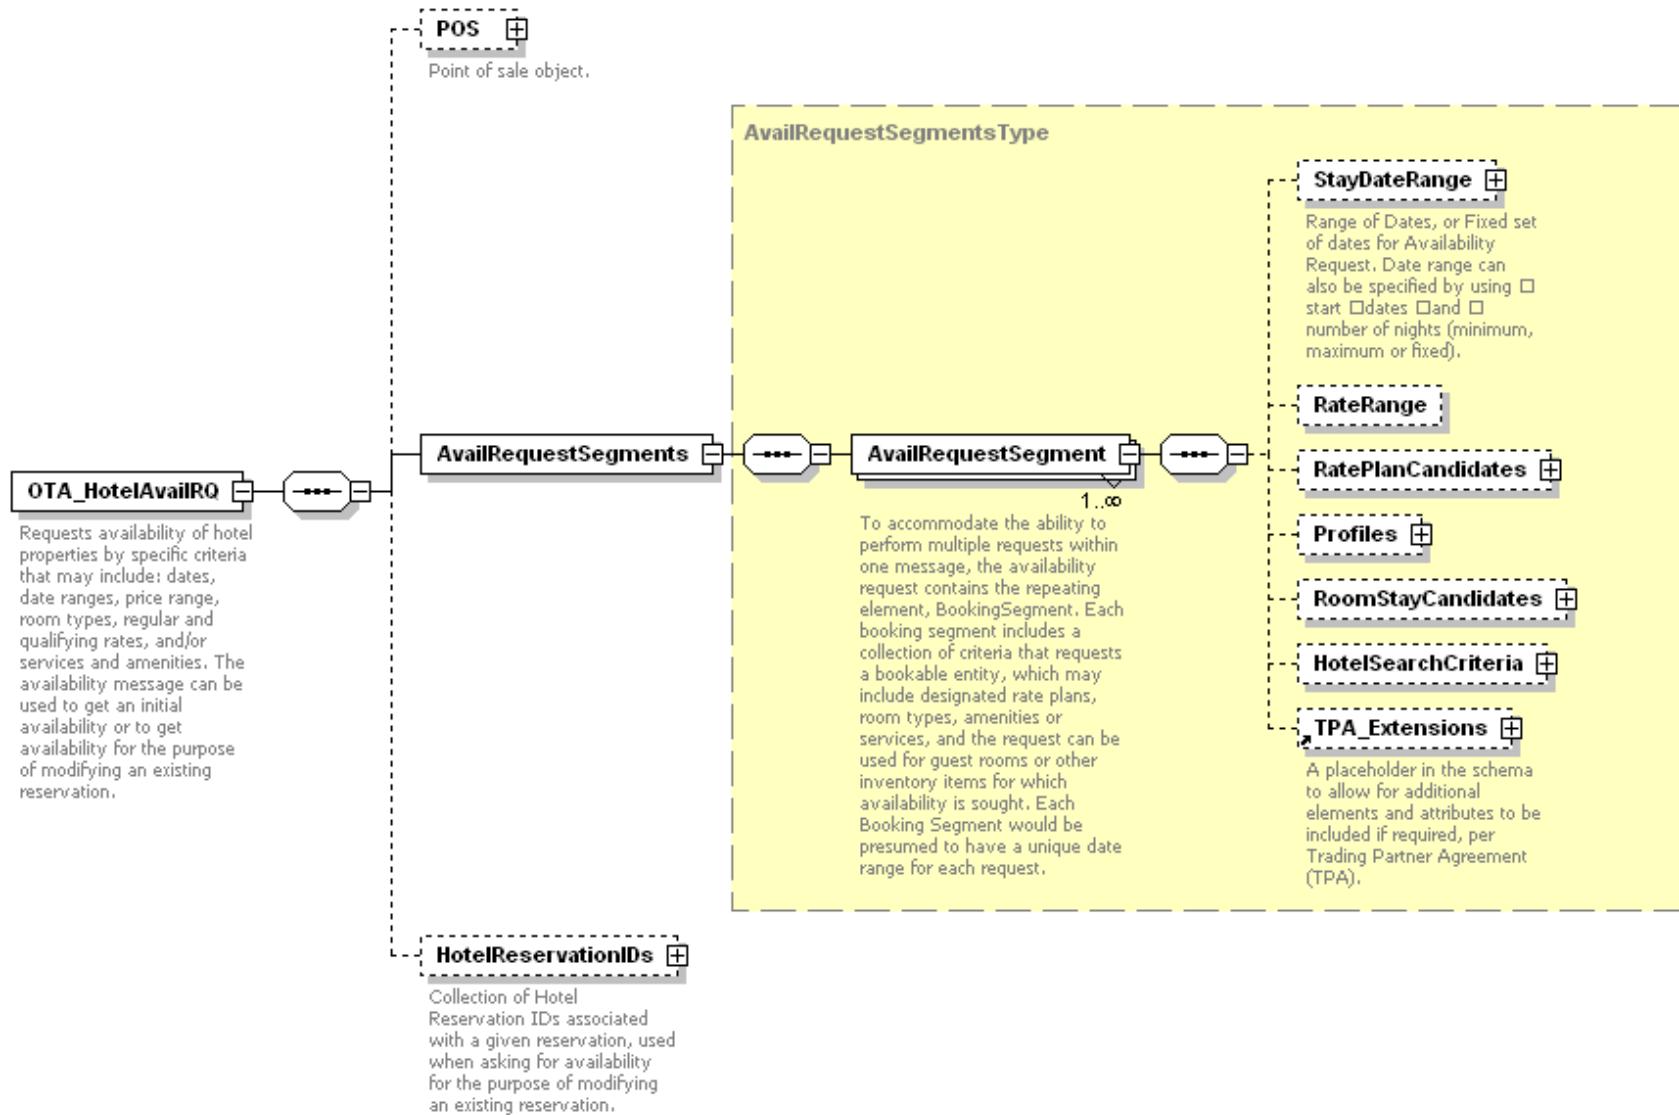

Figure 3. OTA_HotelAvailRQ Schema

6.1 OTA_HotelAvailRQ Elements and Attributes

This transaction can be used to request availability and rate information for a hotel by specific criteria that may include: one or more Hilton-specific hotel code (which is a unique identifier assigned to each property), date ranges, room count, regular and qualifying rates, and/or room amenities.

The Hilton-specific hotel codes can be obtained by using the OTA_HotelSearch transaction.

The following table shows the attributes of the OTA_HotelAvailRQ elements that are supported by the Hilton Transaction Exchange.

Table 8. OTA_HotelAvailRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	AvailRequestSegments		1	Y	
1	AvailRequestSegment		1	Y	
2	StayDateRange		1	Y	Holds the date range for which the availability is requested.
	<i>@Start</i>	DateType		Y	The <i>Start</i> attribute's format is YYYY-MM-DD.
	<i>@Duration</i>	DurationType		Y	<i>Duration</i> has to be in the format P[0-90]D. The maximum stay that can be requested is ninety days.
2	RateRange		0..1	N	
	<i>@CurrencyCode</i>	AlphaLength3	1	Y	The currency in which the rates need to be displayed in the response. By default the rates will be displayed in the currency of the property. CurrencyCode is an ISO 4217, three-letter currency code. See http://www.id3.org/iso4217.html for the list of possible values.
2	RatePlanCandidates		0..1	N	RatePlanCandidates is used to check the availability of promotions or certain client specific rates.
3	RatePlanCandidate		1..4	Y	Out of the 4 RatePlanCandidate elements that are supported 3 can be sent with the <i>RatePlanCategory</i> and <i>RatePlanID</i> and 1 with <i>PromotionCode</i> .
	<i>@RatePlanCategory</i>	StringLength1to64		N	Negotiated rates of the same type are grouped into a single category which can be passed in the <i>RatePlanCategory</i> attribute.
	<i>@RatePlanID</i>	StringLength1to64		N	<i>RatePlanID</i> attribute specifies a special ID code that is associated with the rate.
	<i>@PromotionCode</i>	StringLength1to32		N	<i>PromotionCode</i> needs to be sent in a separate RatePlanCandidate element.
2	RoomStayCandidates		1	Y	RoomStayCandidates contains guest count information.
3	RoomStayCandidate		1	Y	
	<i>@Quantity</i>	Numeric1to999		Y	The <i>Quantity</i> attribute specifies the number of rooms

Table 8. OTA_HotelAvailRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					needed.
4	GuestCounts		1	Y	
	@IsPerRoom	xs:boolean		Y	<i>IsPerRoom</i> means that the guests defined in the GuestCounts object apply to <i>each</i> room in the Number-OfRooms for the RoomStay. The IsPerRoom attribute must always be “true”.
5	GuestCount		1..2	Y	The GuestCount element contains the age and number (count) of guests for the room.
	@AgeQualifyingCode	OTA_CodeType		Y	The AgeQualifyingCode should either be “10” to specify adult or “8” for a child. (These are the values from the OTA Code List Age Qualifying Code (AQC).)
	@Count	Numeric1to999		Y	<i>The number of guests is applied to each room.</i> For instance, if the Quantity attribute is “3” and the GuestCount element specifies two adults and two children, then the availability check will only return room types that have 3 or more rooms available and that can accommodate two adults and two children in each room. You have to provide at least one GuestCount element, specifying the number of adults. At most, two GuestCount elements are allowed: one for the number of adults and one for the number of children
4	RoomAmenity		0..2	N	
	@RoomAmenity	OTA_CodeType		Y	This attribute can be used to request for Smoking/Non-smoking rooms and/or rooms that support extra bed. See Appendix A, Table 6 for the RoomAmenity Codes.
2	HotelSearchCriteria		1	Y	
3	Criterion		1..25	Y	
4	HotelRef		1	Y	HotelRef contains the Hilton-specific hotel code (provided

Table 8. OTA_HotelAvailRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
					in the HotelCode attribute). Typically, hotel codes are obtained in a OTA_HotelSearch response and then used to narrow a search after the initial request. For instance, an OTA_HotelSearch request could be used to get a list of hotel codes for hotels in New York City. The availability of a specific hotel could then be checked by setting the HotelRef attribute to one of the hotel codes (and providing a date range and any other necessary information).
	<i>@HotelCode</i>	StringLength1to8		Y	5 character Hilton property code.

6.2 OTA_HotelAvailRQ Examples

Example 1 - This is an example of a request that checks the availability for 2 rooms in three hotels for September 12, 2008 through September 15, 2008 for 1 Adult and 1 child.

```
<OTA_HotelAvailRQ TimeStamp="2008-03-28T09:54:36.949" Target="Production" Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
  <AvailRequestSegments>
    <AvailRequestSegment>
      <StayDateRange Start="2008-09-12" Duration="P3D"/>
      <RoomStayCandidates>
        <RoomStayCandidate Quantity="2">
          <GuestCounts IsPerRoom="true">
            <GuestCount AgeQualifyingCode="10" Count="1"/>
            <GuestCount AgeQualifyingCode="8" Count="1"/>
          </GuestCounts>
        </RoomStayCandidate>
      </RoomStayCandidates>
      <HotelSearchCriteria>
        <Criterion>
          <HotelRef HotelCode="MIAOP"/>
        </Criterion>
        <Criterion>

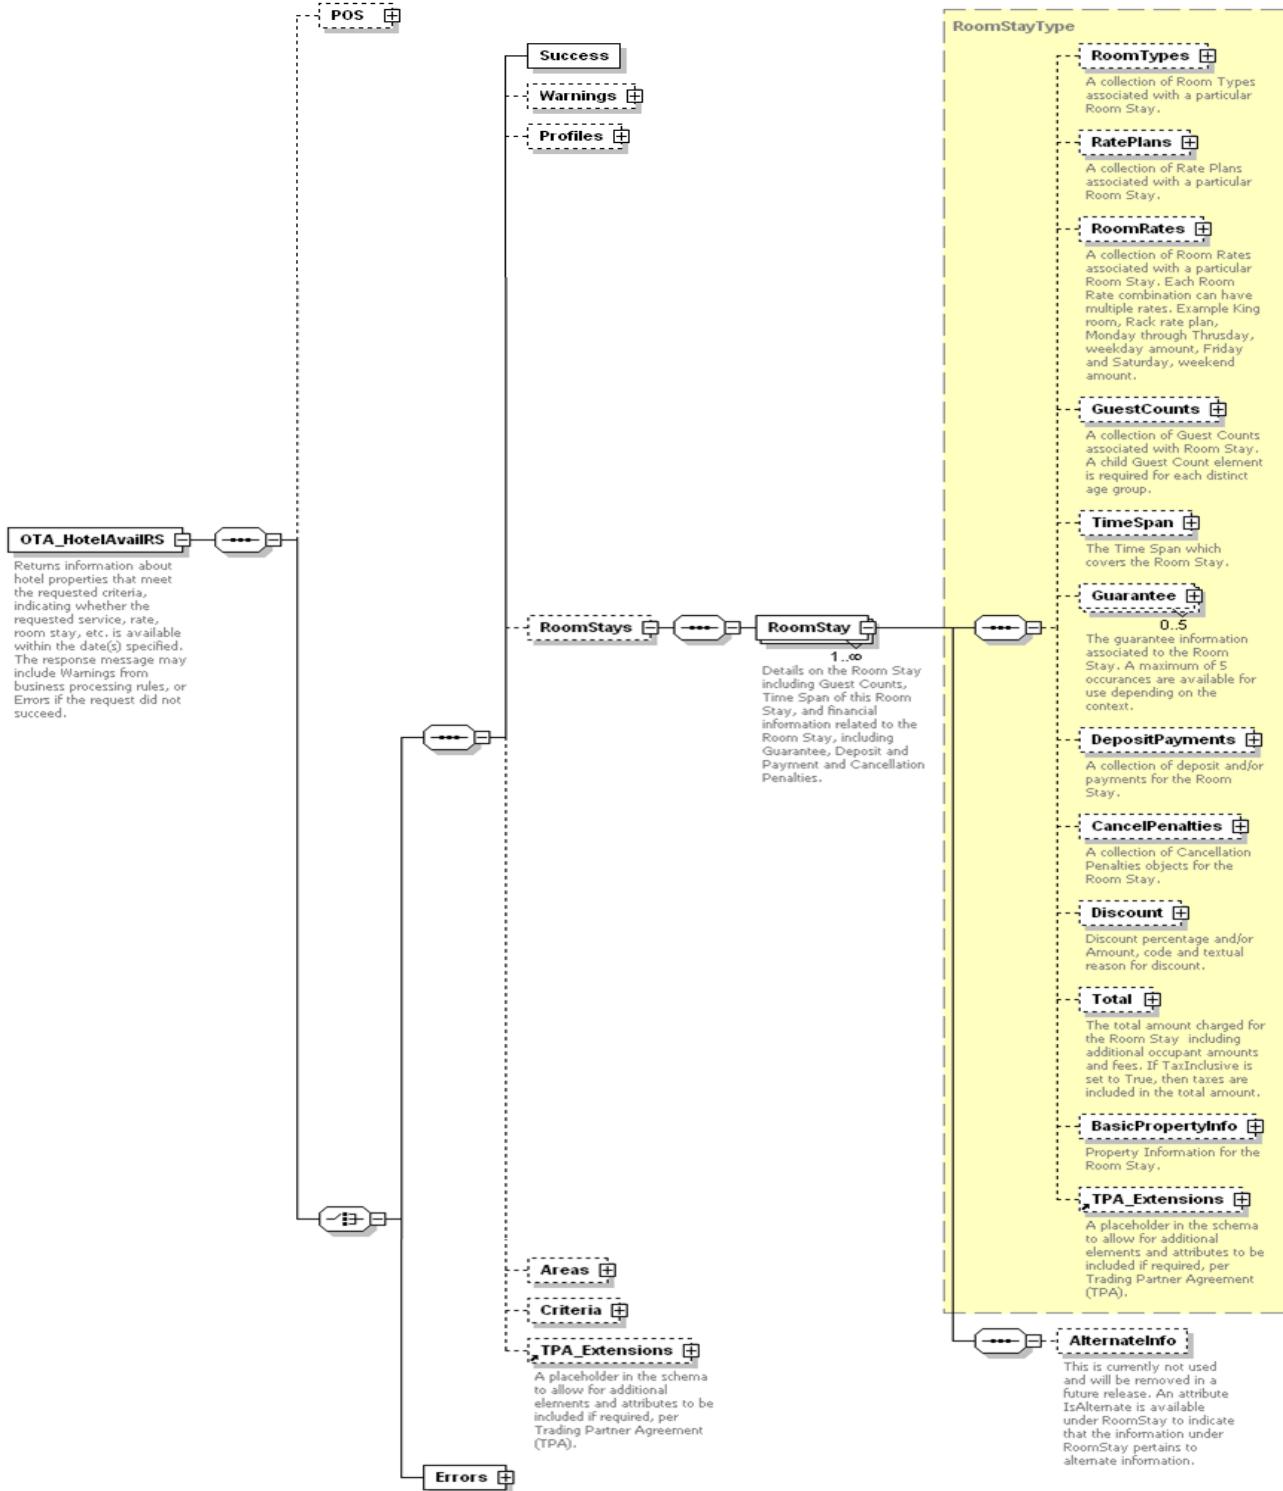

Figure 4. OTA_HotelAvailRS Schema

6.3 OTA_HotelAvailRS Elements and Attributes

OTA_HotelAvailRS returns rates for all available room types at the requested property that meet the requested criteria like room amenity and dates specified if a single property was sent in the request. If availability for multiple properties was requested then only the lowest rate per property will be returned

The response message may include Warnings from business processing rules or Errors if the request did not succeed

The following table shows the attributes of the OTA_HotelAvailRS elements that are supported by the Hilton Transaction Exchange.

Table 9. OTA_HotelAvailRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelAvailRS		1	Y	
1	Success		0..1	N	See section 4.1.2 for more info on Success
1	Errors		0..1	N	See section 4.1.2 for more info on errors.
2	Error		1	Y	
	@Type	OTA_CodeType		Y	
1	Warnings		0..1	N	See section 4.1.2 for more info on warnings.
2	Warning		1..n	Y	
	@Type	OTA_CodeType		Y	
1	RoomStays		0..1	N	
2	RoomStay		1..n	Y	
3	RatePlans		0..1	N	The RatePlans element is a collection of rate plans that are associated with the room stay.
4	RatePlan		1..n	Y	
	@RatePlanCode	StringLength1to16		Y	
	@RateIndicator	RateIndicatorType		N	The RatePlan@RateIndicator will always be "ChangeDuringStay" if a rate changes exist for one or more room types associated with the rate plan.
5	CancelPenalties		1	Y	
6	CancelPenalty		1	Y	The CancelPenalties element defines the cancellation policy for the rate plan.
7	PenaltyDescription		1	Y	
8	Text		1	Y	
5	RatePlanDescription		1	Y	

Table 9. OTA_HotelAvailRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
6	Text				
3	RoomRates		1	Y	
4	RoomRate		1..n	Y	
	@NumberOfUnits	Numeric1		Y	Number of rooms requested.
	@BookingCode	StringLength1to16		N	Hilton-specific value. See Appendix A, Table 5 for a complete list.
	@RoomTypeCode	StringLength1to64		Y	The RoomTypeCode is a Hilton-specific value representing the room type.
	@RatePlanCode	StringLength1to16		Y	
	@RatePlanID	StringLength1to64		N	
	@EffectiveDate	xs:date		N	
	@ExpireDate	xs:date		N	
5	Rates		1	Y	
6	Rate		1..n	Y	Multiple rate elements will be returned only if there is a rate change over stay and if during registration you were setup to receive rate changes.
	@EffectiveDate	xs:date		N	The RoomRate element's EffectiveDate and ExpireDate attributes will always be populated.
	@ExpireDate	xs:date		N	
	@RateMode	OTA_CodeType		N	<i>RateMode</i> can be 1,2, 3 or 4 depending on whether the Base element holds the date of arrival rate (1), minimum rate (2), maximum rate (3), or average rate (4). These options are client specific which are setup during registration and will be applicable to both single and multi property avails.
	@RateTimeUnit	TimeUnitType		N	This attribute will be returned only if during registration you were setup to get rate changes over stay and

Table 9. OTA_HotelAvailRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					if there are rate changes. This attribute will always be "Day" since the rate returned in the Base element is the daily rate.
7	Base		1	Y	Either AmountBeforeTax or AmountAfterTax will be returned.
	@AmountBeforeTax	Money		N	The AmountBeforeTax attribute contains the base dollar amount of the rate per room per night excluding taxes. The amount returned back depends on the RateMode attribute.
	@AmountAfterTax	Money		N	The AmountAfterTax attribute is the entire amount of the stay including applicable taxes. The amount returned back depends on the RateMode attribute.
	@CurrencyCode	AlphaLength3		Y	CurrencyCode is an ISO 4217, three-letter currency code. See http://www.id3.org/iso4217.html for the list of possible values.
7	AdditionalGuestAmounts		0..1	N	This element is returned only if Rollaway or crib was requested in OTA_HotelAvailRQ and if the room type supports an extra bed.
8	AdditionalGuestAmount		1..2	Y	
9	Amount		1	Y	Either the AmountBeforeTax or AmountAfterTax will be returned.
	@AdditionalFeesExcludedIndicator	xs:boolean		Y	Will always be "true" since the additional rates are not included in the total price of the room.
	@CurrencyCode	AlphaLength3		Y	The currency in which the rates are returned.
	@AmountBeforeTax	Money		N	
	@AmountAfterTax	Money		N	
10	AddlGuestAmtDescription		1	Y	
11	Text		1	Y	A description of the additional charge.

Table 9. OTA_HotelAvailRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
7	PaymentPolicies		0..1	N	The guarantee/deposit policies for this room are specified in the PaymentPolicies element. A list of all the payment/guarantee policies supported by HTE is provided in Appendix A, Table 1 .
8	RequiredPayment		1..n	Y	
	@PaymentCode	StringLength1to8		Y	
9	AmountPercent		0..1	N	
	@Amount	Money		Y	If the payment/guarantee policy requires a deposit then the deposit amount will be returned in the Amount attribute of the AmountPercent element.
	@CurrencyCode	AlphaLength3		Y	
7	Total		0..1	N	The total price for this room type excluding the additional amounts for rollaway and crib.
	@AmountAfterTax	Money		Y	The AmountAfterTax attribute is the entire amount of the stay including applicable taxes.
	@CurrencyCode	AlphaLength3		Y	The currency in which the total price is returned.
8	Taxes		1	Y	
9	Tax		1..2	Y	
	@Code	OTA_CodeType		Y	The Code (refer to the OTA Code Fee List type table) identifies the fees applied to the rate, the Code can be either "14 or "17".
	@Amount	Money		Y	If the Code is "14" then the Amount will have the service charges that were applied to the rate and if Code is "17" then the Amount will include all taxes and additional fees that were applied to the rate.
	@CurrencyCode	AlphaLength3		Y	The currency in which the taxes are returned.
5	Features		0..1	N	Feature elements are used to describe the room. Both human-readable text and Hilton-specific codes are used to describe/classify the room.

Table 9. OTA_HotelAvailRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
6	Feature		1..n	Y	
	@RoomAmenity	OTA_CodeType		N	<p>Instead of having a value from the OTA Code List Room Amenity Type (RMA), the RoomAmenity attribute is a value from the Hilton Room Amenity Codes table in Appendix A, Table 6. There are 12 possible values. There may be more than one instance of this attribute, for instance, if a room is classified as a non-smoking suite with two beds, there will be three RoomAttribute attributes with the values of "7", "2" and "1", respectively. If a meal plan is associated with the room stay then the value of the RoomAttribute could be "8" and the Text element within the Feature element would have the meal plan code. The meal plan code can be mapped to its description using the Hilton Meal Plan Codes table in Appendix A, Table 4.</p> <p>NOTE: Meal plan codes are not returned in multi property avail responses.</p>
7	Description		0..1	N	
8	Text		1..5	Y	<p>If the RoomAmenity attribute is not present in the Feature element then the Text element will have the description of the room as shown below...</p> <pre><Feature> <Description> <Text>1 KING BED NONSMOKING</Text> </Description> </Feature></pre>
3	TimeSpan		1	Y	The TimeSpan element is equivalent to the Stay-DateRange element in the original request.
	@Start	DateType		Y	
	@Duration	DurationType		N	
3	BasicPropertyInfo		1	Y	The BrandCode, HotelCode and HotelName will always be populated in the BasicPropertyInfo element.

Table 9. OTA_HotelAvailRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	@BrandCode	StringLength1to8		Y	
	@HotelCode	StringLength1to8		Y	
	@HotelName	StringLength1to128		Y	
1	Criteria		0..1	N	Criteria and its sub-elements will contain the values for each hotel in the request.
2	Criterion		1..25	Y	
3	HotelRef		1	Y	
	@HotelCode	StringLength1to8	1	Y	

6.4 OTA_HotelAvailRS Examples

Example 1 - The following example is a response to an availability check for two properties for September 7th through the 12th. In this example we were searching for 3 rooms each with 2 adults in each room. Only one rate is returned for each property – the “best available” rate.

```

Example 2 - This is an example of a response to an availability check for a specific property, the Frankfurt Hilton. The stay is for January 1st for one night for 2 adults in 1 room. Only the room types and rates that are available for that night are included. (For each room type, at least one room is available at the designated rate at the time the request was made.) The hotel code for this property is "FRAHI".

```

OTA_HotelRes

The OTA_HotelResRQ message is used to reserve a room at a hotel. It is often preceded by an OTA_HotelAvailRQ/RS message, which is used to check the availability of the hotel before attempting the reservation. The availability check does not hold the room; therefore it cannot be assumed that the room is available at the time of the OTA_HotelResRQ request. There is no requirement to check the availability before sending a reservation request, as long as all the necessary information (such as the hotel code, brand code and room code) is available.

The reservation request is an atomic request that can either be approved or denied. If there is a problem booking the reservation, the OTA_HotelResRS response will return an appropriate business message. For instance, if the reservation requires a deposit and there is no payment information included in the request, it will be denied. Once the request is made and a successful result is returned, a reservation exists from that point forward.

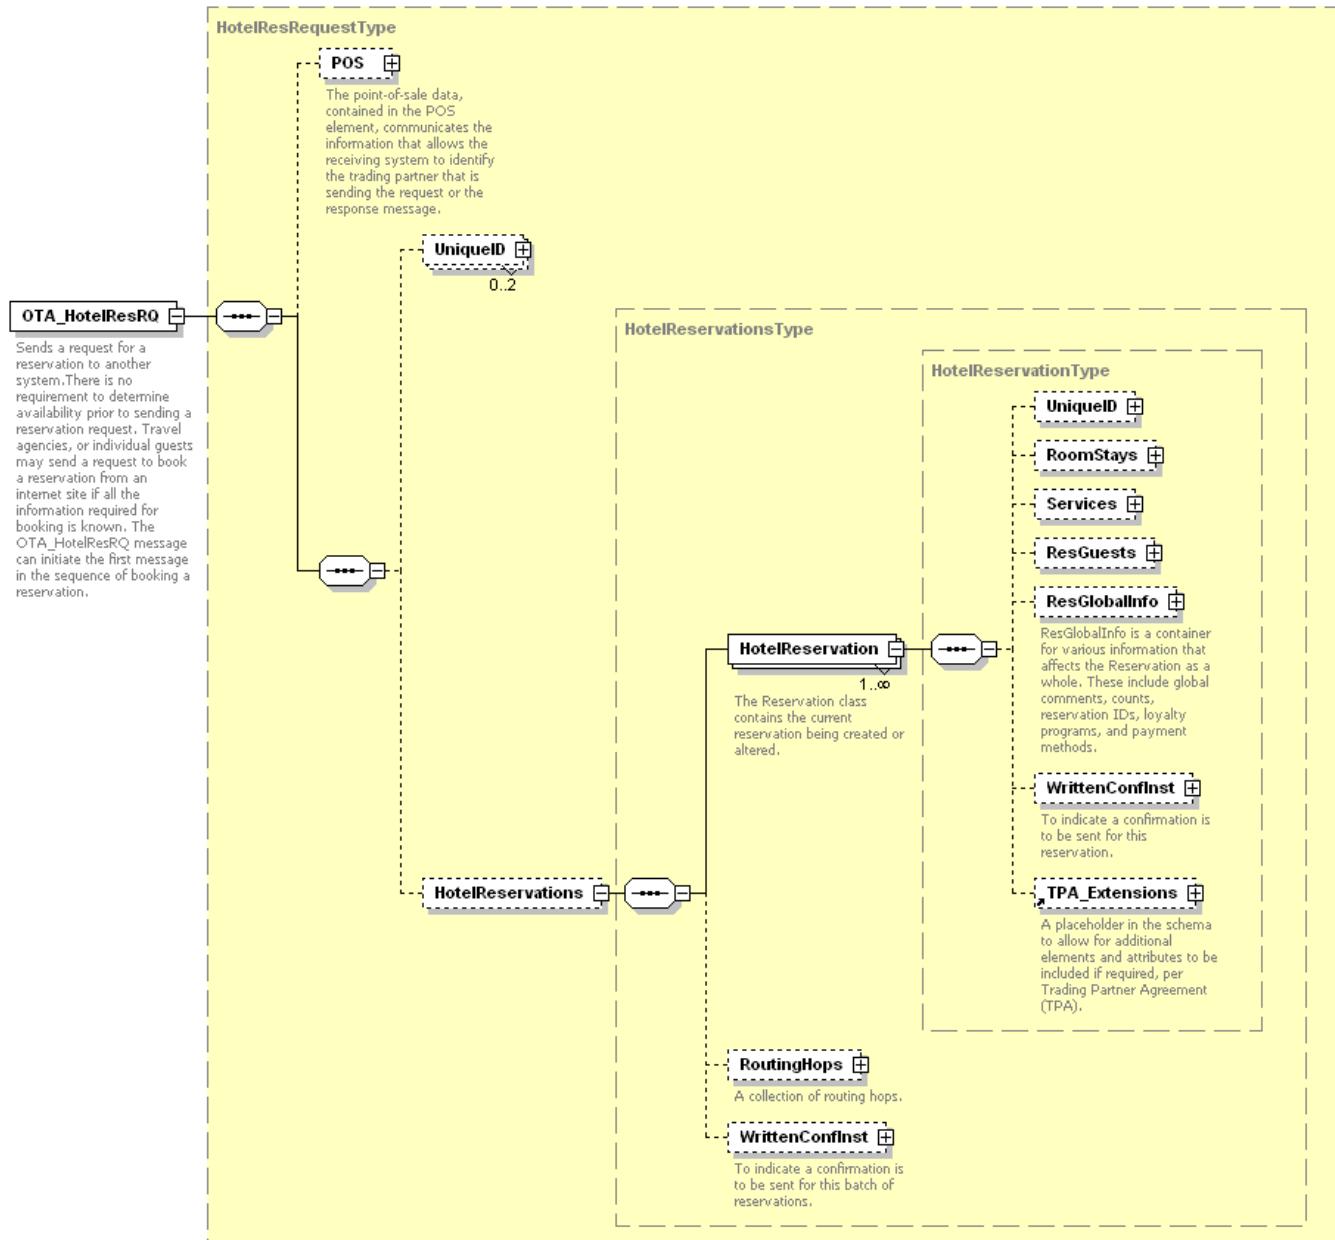

Figure 5. OTA_HotelResRQ Schema

7.1 OTA_HotelResRQ Elements and Attributes

The following table shows the attributes of the HotelReservations element that are supported by the Hilton Transaction Exchange.

Table 10. OTA_HotelResRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelResRQ		1	Y	An OTA_HotelResRQ message should always contain <i>one and only one</i> HotelReservation element.
	@ResStatus	TransactionAction-Type	1	Y	When the ResStatus is set to Commit, a reservation is being made. The reservation will either be successful and a booking is made, or an appropriate error response will be returned.
1	POS		0..1	N	This element needs to be used <i>only</i> when an IATA number other than the one associated with your profile needs to be attached to the reservation.
2	Source		1	Y	
3	RequestorID		1	Y	
	@Type	OTA_CodeType		Y	For Type, the OTA Code List Unique Id Type (UIT) value of "5" should always be used for "IATA".
	@ID	StringLength1to32		Y	The IATA that needs to be attached to the reservation needs to be sent in this attribute.
1	HotelReservations		1	Y	
2	HotelReservation		1	Y	This element contains the current reservation that is being created.
3	RoomStays		1	Y	
4	RoomStay		1	Y	The RoomStay element contains information about the room that is being booked.
	@PromotionCode	StringLength1to32		N	A promotion code may be requested.
5	RoomTypes		1	Y	
6	RoomType		1	Y	

Table 10. OTA_HotelResRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	@RoomTypeCode	StringLength1to16		Y	The RoomTypeCode attribute is a Hilton-specific code that is typically obtained from an OTA_HotelAvailRS message
	@NumberOfUnits	Numeric1		Y	Only one room can be booked per transaction. So the value of this attribute must always be "1".
7	Amenities		0..1	N	
8	Amenity		1..3	Y	The room amenities that can be requested are either Smoking/Non Smoking or One Bed/Two Beds or Rollaway/Crib.
	@RoomAmenity	OTA_CodeType		Y	See Appendix A, Table 6 , for the codes.
5	RatePlans		1	Y	Special rate plan codes, such as those used for negotiated rates, can be passed in using the RatePlanCode attribute of the RatePlan element. The RatePlanCode is required. If a special client specific rate is requested then the BookingCode and the RatePlanID attributes also need to be populated.
6	RatePlan		1	Y	
	@BookingCode	StringLength1to16		N	The BookingCode attribute is a Hilton-specific code that is typically obtained from an OTA_HotelAvailRS message
	@RatePlanID	StringLength1to64		N	The RatePlanID attribute is a Hilton-specific code that is typically obtained from an OTA_HotelAvailRS message.
	@RatePlanCode	StringLength1to16		Y	The RatePlanCode attribute is a Hilton-specific code that is typically obtained from an OTA_HotelAvailRS message.
5	BasicPropertyInfo		1	Y	The BasicPropertyInfo element contains the HotelCode and BrandCode, which are Hilton-specific.
	@BrandCode	StringLength1to16		Y	See Appendix A, Table 2 , for the brand code values.
	@HotelCode	StringLength1to8		Y	
3	ResGuests		1	Y	Information about the guests is captured in the ResGuests element.
4	ResGuest		1	Y	

Table 10. OTA_HotelResRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
5	Profiles		1	Y	
6	ProfileInfo		1	Y	
7	Profile		1	Y	
8	Customer		1	Y	
9	PersonName		1	Y	The PersonName element has several sub elements, but the Transaction Exchange only accepts NamePrefix which is optional, and GivenName and Surname which are required.
10	NamePrefix		0..1	N	
10	GivenName		1	Y	The value of GivenName should start with a letter of the alphabet. Max of 25 characters.
10	Surname		1	Y	The value of Surname should start with a letter of the alphabet and must be a minimum of 2 characters and max of 25.
9	Telephone		1	Y	
	<i>@PhoneNumber</i>	StringLength1to32		Y	
9	Email		0..1	N	Email is optional, if sent it should be in the user@domain format.
	<i>@DefaultInd</i>	Boolean		N	If attribute DefaultInd is set to “true” an email confirmation will be sent to the email address provided.
9	Address		1	Y	
10	AddressLine		1..3	Y	At least one AddressLine element is required. Max of 50 characters.
10	CityName		1	Y	
10	PostalCode		0..1	N	
10	StateProv		0..1	N	
	<i>@StateCode</i>	StateProvCodeType		Y	The StateCode attribute is required for the United States and Canada, but not for other countries.
10	CountryName		1	Y	

Table 10. OTA_HotelResRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	@Code	ISO3166		Y	
3	ResGlobalInfo		1	Y	ResGlobalInfo contains guest count information.
4	GuestCounts		1	Y	A collection of Guest Counts associated with the whole reservation.
	@IsPerRoom	xs:boolean		Y	<i>IsPerRoom</i> means that the guests defined in the GuestCounts object apply to <i>each</i> room in the NumberOfRooms for the RoomStay. The IsPerRoom attribute must always be “true”.
5	GuestCount		1..2	Y	The GuestCount element contains the age and number of guests for the room. At least one GuestCount element, specifying the number of adults is required. You have to provide at least one GuestCount element, specifying the number of adults. At most two GuestCount elements are allowed: one for the number of adults and one for the number of children.
	@AgeQualifyingCode	OTA_CodeType		Y	The AgeQualifyingCode should either be “10” to specify adult or “8” for a child. (These are the values from the OTA Code List Age Qualifying Code (AQC).)
	@Count	Numeric1to999		Y	The number of guests in each AgeQualifyingCode.
4	TimeSpan		1	Y	The TimeSpan element must have the Start and Duration attributes populated.
	@Start	DateOrTimeOr- DateTimeType		Y	The arrival date for the reservation.
	@Duration	DurationType		Y	The length of stay. Should be in the format P[0-90]D.
4	Memberships		0..1	N	
5	Membership		1..2	Y	Up to two Membership elements can be provided. The only two memberships supported at this time are HHonors (HHonors is the Hilton guest reward program.) and Airline. For HHonors, the ProgramCode value is “HH”, and the guest’s HHonors account number must be in the AccountId attribute. Only one HHonors account can be associated with the reservation, even if there are multiple HHonors members who will be staying as guests. If

Table 10. OTA_HotelResRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
					a HHonors number is being sent in the request then the <sur-name> needs to match the last name in the HHonors profile. The list of valid memberships and their respective ProgramCode values are available www.iata.org .
	@AccountID	StringLength1to32		Y	HHonors number or the Frequent Flyer number.
	@ProgramCode	StringLength1to32		Y	"HH" or an Airline code.
4	Comments		0..1	N	
5	Comment		1..3	Y	Up to three comments are allowed as part of the reservations.
6	Text		1	Y	Free-form text can be sent in the Text element. An example is: <Text>Guest requests a first floor room please if one is available. </Text>. Each Text element can be up to 65 characters.
4	Guarantee		1	Y	
	@GuaranteeCode	StringLength1to32		Y	Any one of the Guarantee Policies that was returned in the OTA_HotelAvailRS transaction needs to be sent in Guarantee-Code attribute of the Guarantee element. Depending on the guarantee policy, the PaymentCard element may or may not be required. See Appendix A, Table 1 for a list of Guarantee Codes.
5	GuaranteesAccepted		0..1	N	This element is required only for guarantee policies Credit Card Guarantee (CC), Credit Card Deposit (CR) and Full PrePayment (FP).
6	GuaranteeAccepted		1	Y	
7	PaymentCard		1	Y	The PaymentCard element has four attributes, all of which are required. The payment information could be used to "hold" the reservation or it could be used to pay for the room(s) at the time of the reservation, depending on the guarantee policy of the reservation.
	@CardType	OTA_CodeType		Y	HTE only supports a value of "1" for CardType per the OTA Code ListCard Type (CDT) which stands for "Credit".
	@CardCode	PaymentCardCode-		Y	The two character code of the credit card issuer. See Table 11

Table 10. OTA_HotelResRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
		Type			for the list of OTA CardCode values. Values must be in uppercase.
	@CardNumber	Numer-icStringLength1to19		Y	The credit card number embossed on the card.
	@ExpireDate	MMYYDate		Y	The expiration date of the credit card.
	HotelReservationIDs		0..1	N	
5	HotelReservationID		1	Y	This element can be used to associate an identifier with the reservation. This information will be echoed back in the OTA_HotelResRS. For the OTA_HotelResRQ transaction, there will be a single occurrence of the HotelReservationID element.
	@ResID_Value	StringLength1to10		Y	An identifier that can be used to identify the reservation.
	@ResID_Date	xs:dateTime		Y	Date of the creation of this reservation
	@ResID_Source	StringLength1to64		Y	Name of the source company/system.
	@ResID_Type	OTA_CodeType		Y	Is the type of the Reservation Id. The only value supported is "5" (refer to the OTA Code Unique ID list table),

The 2004B version of the OTA spec allows these values for the CardCode attribute:

Table 11. OTA 2004B Specification Credit Card Codes	
Value	Credit Card
AX	American Express
*BC	Bank Card
*BL	Carte Bleu
CB	Carte Blanche
DN	Diners Club
DS	Discover Card
**EC	Eurocard
JC	Japanese Credit Bureau Credit Card
MC	Master Card
*TP	Universal Air Travel Card
VI	Visa

* Not supported by Hilton Transaction Exchange

** Available only at some properties

7.2 OTA_HotelResRQ Examples

Example 1 - This is an example of a request to book a room at the Waldorf London Hilton in London, GB. The hotel code is "LONWA" and the brand code for Hilton International is "HI". One room with one adult and one child is needed for two nights. The reservation is guaranteed using a Credit card.

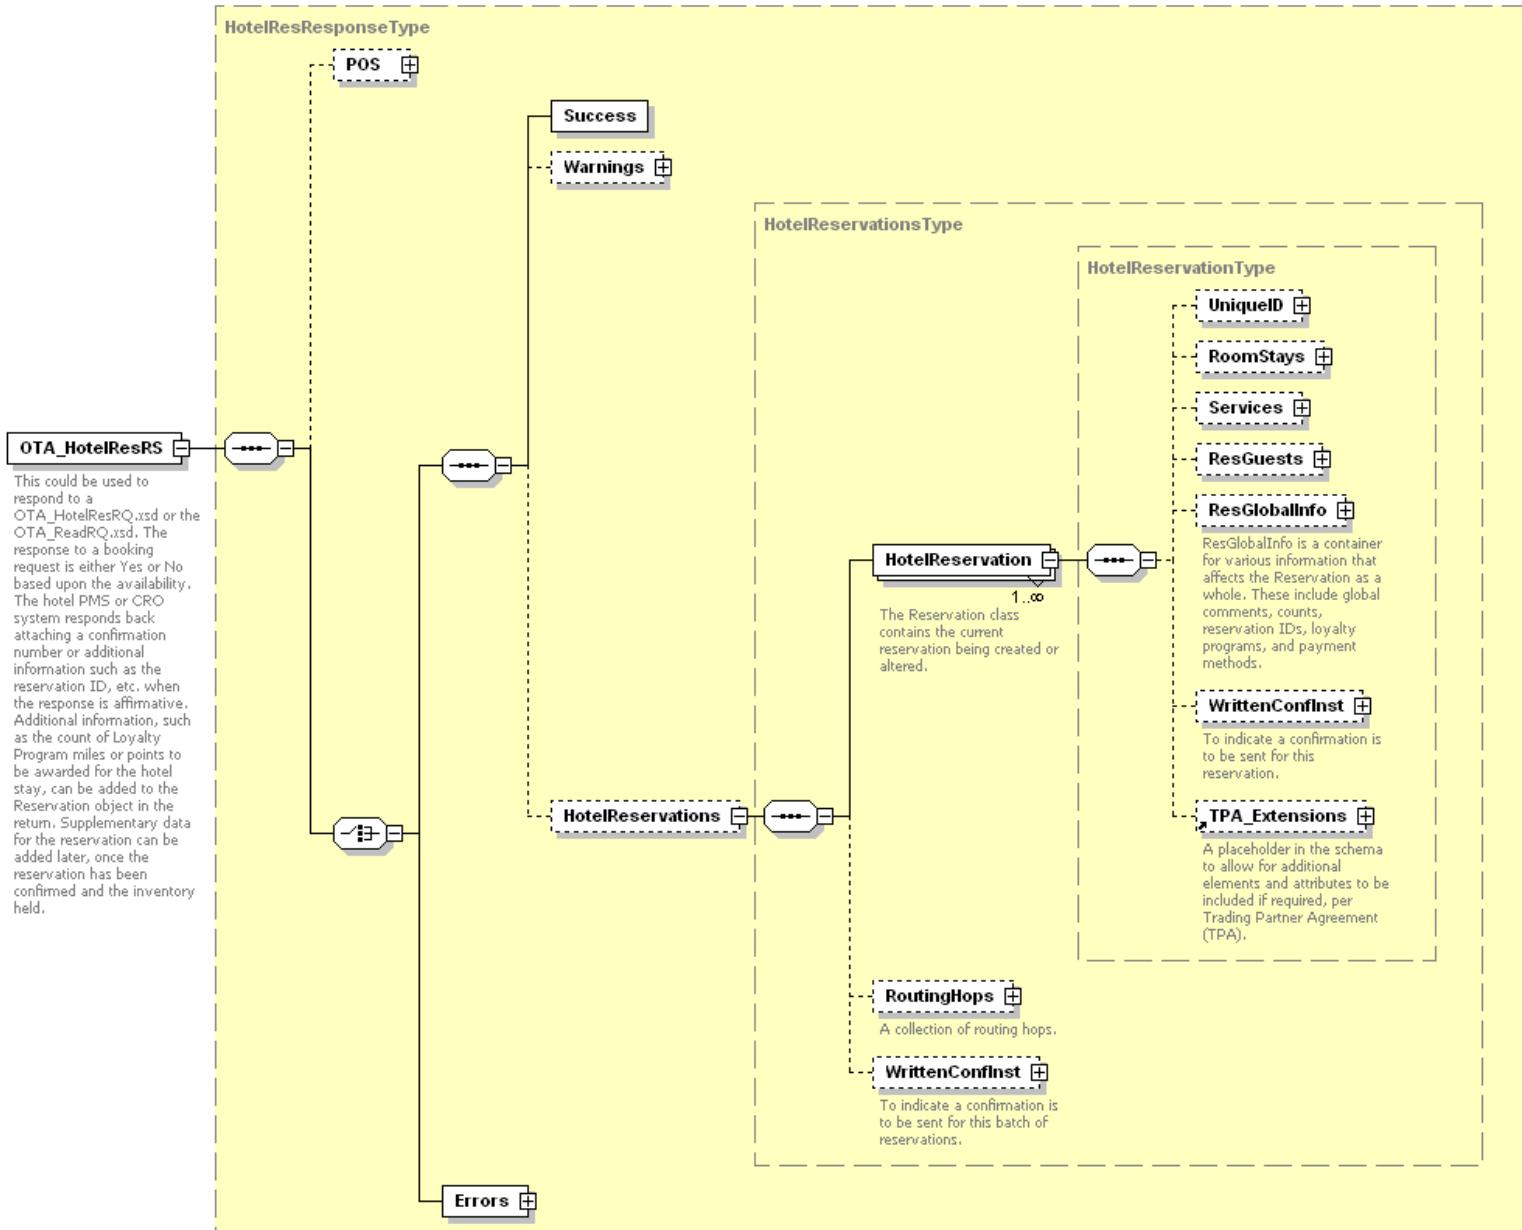

Figure 6. OTA_HotelResRS Schema

7.3 OTA_HotelResRS Elements and Attributes

The following table shows the attributes of the OTA_HotelResRS elements that are supported by the Hilton Transaction Exchange.

Table 12. OTA_HotelResRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelResRS		1	Y	
	<i>@ResResponseType</i>	TransactionStatusType		Y	<p>With the ResStatus set to "Commit", the OTA_HotelResRS message returns confirmation that a reservation has been made, including a unique confirmation number that identifies the reservation. In this case the value of ResResponseType will be "Committed".</p> <p>If there is an error with the request, an appropriate error is returned.</p>
1	Success		0..1	N	See section 4.1.2 for more info on Success.
1	Errors		0..1	N	See section 4.1.2 for more info on Errors.
2	Error		1	Y	
	<i>@Type</i>	OTA_CodeType		Y	
1	Warnings		0..1	N	See section 4.1.2 for more info on Warnings.
2	Warning		1	Y	
	<i>@Type</i>	OTA_CodeType		Y	
1	POS		0..1	N	The POS element will be returned only if it was sent in the OTA_HotelResRQ.
2	Source		1	Y	
3	RequestorID		1	Y	
	<i>@Type</i>	OTA_CodeType		Y	The value for attribute Type will always be "5"
	<i>@ID</i>	StringLength1to32		Y	The IATA number sent in the request.
1	HotelReservations		0..1	N	

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
2	HotelReservation		1	Y	There will be only one HotelReservation element in the message.
3	RoomStays		1	Y	The RoomStays element contains the RoomTypes and the RatePlans element which have the same information that was in OTA_HotelResRQ.
4	RoomStay		1	Y	
5	RoomTypes		0..1	N	
6	RoomType		1	Y	
	@RoomTypeCode	StringLength1to16		Y	The Hilton room type used in the reservation.
	@NumberOfUnits	Numeric1		Y	The value of NumberOfUnits will always be “1”
7	RoomDescription		1	Y	
8	Text		1	Y	Information about the room.
7	Amenities		0..1	N	
8	Amenity		1	Y	The meal plan code for the reservation will be returned this element. See Appendix A, Table 4 for an explanation of the meal plan codes.
	@RoomAmenity	OTA_CodeType		Y	Will always be “8” for MealPlan. See Appendix A, Table 6.
5	RatePlans		0..1	N	
6	RatePlan		1	Y	This element has information about the rate plan associated with this reservation.
	@RatePlanCode	StringLength1to16		Y	Hilton specific rate plan code.
7	RatePlanDescription		1	Y	
8	Text		1	Y	This element has the description of the rate plan.
5	RoomRates		0..1	N	The RoomRate element has the room rates and additional rates for rollaway and crib. The additional rates are returned only if requested and supported by that room type.

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
6	RoomRate		1	Y	The RoomRate element has the same format as the OTA_HotelAvailRS message. (See section 6.3.)
	<i>@EffectiveDate</i>	xs:date		Y	Check in date. The EffectiveDate and ExpireDate attributes will always be populated.
	<i>@ExpireDate</i>	xs:date		Y	Check out date. The EffectiveDate and ExpireDate attributes will always be populated.
	<i>@RoomTypeCode</i>	StringLength1to64		Y	
	<i>@RatePlanCode</i>	StringLength1to16		Y	
	<i>@PromotionCode</i>	StringLength1to32		N	
7	Rates		1	Y	
8	Rate		1..n	Y	If there is a rate change, then more than one Rate element will be returned. For instance, an availability check for January 1 st through the 10 th may yield one room rate for January 1 st through the 5 th and a different rate for the 6 th through the 10 th . In this case, there would be two Rate elements.
	<i>@EffectiveDate</i>	xs:date		Y	The starting date from when the rate returned in the Base element is applicable.
	<i>@ExpireDate</i>	xs:date		Y	Indicates the date when the rate in the Base element expires.
	<i>@RateTimeUnit</i>	TimeUnitType		Y	Will always be "Day". Since the rate returned in the Base element is the daily rate.
9	Base		1	Y	Either the AmountBeforeTax or AmountAfterTax will be returned.
	<i>@AmountBeforeTax</i>	Money		N	The AmountBeforeTax attribute contains the base dollar amount of the rate per room per night excluding taxes. The amount returned back depends on the RateMode attribute.
	<i>@AmountAfterTax</i>	Money		N	The AmountAfterTax attribute is the entire amount of the stay including applicable taxes.

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	@CurrencyCode	AlphaLength3		Y	The currency in which the rates are returned.
9	AdditionalGuestAmounts		0..1	N	This element is returned only if Rollaway or crib was requested in OTA_HotelResRQ and if the room type supports an extra bed.
10	AdditionalGuestAmount		1..2	Y	
11	Amount		1	Y	Either the AmountBeforeTax or AmountAfterTax will be returned.
	@AdditionalFeesExcludedIndicator			Y	Will always be “true” since the additional rates are not included in the total price of the room.
	@CurrencyCode			Y	The currency in which the rates are returned.
	@AmountBeforeTax			N	
	@AmountAfterTax			N	
11	AddlGuestAmtDescription		1	Y	
12	Text		1	Y	A description of the additional charge.
5	BasicPropertyInfo		1	Y	
	@BrandCode	StringLength1to16		N	Hilton specific brand code of the hotel. See Appendix A., Table 2.
	@HotelCode	StringLength1to8		Y	Hilton specific hotel code.
	@HotelName	StringLength1to128		N	The name of the hotel.
3	ResGuests		1	Y	The guest information sent in OTA_HotelResRQ is echoed back in the response.
4	ResGuest		1	Y	
5	Profiles		1	Y	
6	ProfileInfo		1	Y	
7	Profile		1	Y	
8	Customer		1	Y	

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
9	PersonName		1	Y	
10	NamePrefix		0..1	N	
10	GivenName		1	Y	
10	Surname		1	Y	
9	Telephone		0..1	N	
	@PhoneNumber	StringLength1to32		Y	
9	Email		0..1	N	
9	Address		1	Y	
10	AddressLine		1..3	Y	
10	CityName		1	Y	
10	PostalCode		0..1	N	
10	StateProv		0..1	N	
	@StateCode	StateProvCode-Type		Y	
10	CountryName		1	Y	
	@Code	ISO3166		Y	
3	ResGlobalInfo		1	Y	The ResGlobalInfo element will be populated with the Guarantee and Cancel policy information.
4	GuestCounts		0..1	N	Information about the number of guests per room.
	@IsPerRoom	xs:boolean		Y	<i>IsPerRoom</i> means that the guests defined in the GuestCounts object apply to <i>each</i> room in the NumberOfRooms for the RoomStay. The IsPerRoom attribute must always be “true”.
5	GuestCount		1..2	Y	
	@AgeQualifyingCode	OTA_CodeType		Y	
	@Count	Numeric1to999		Y	

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
4	TimeSpan		0..1	N	
	@Start	DateOrTimeOr- DateTimeType		Y	
	@Duration	DurationType		Y	
4	Memberships		0..1	N	Holds information regarding the Memberships associated with the reservation.
5	Membership		1..2	Y	
	@AccountID	StringLength1to32		Y	
	@ProgramCode	StringLength1to32		Y	
4	Comments		0..1	N	Comments associated with the reservation.
5	Comment		1..3	Y	
6	Text		1	Y	
4	Guarantee		0..1	N	
5	GuaranteeDescription		1	Y	
6	Text		1	Y	Description of the guarantee method used to hold the reservation.
4	CancelPenalties		0..1	N	
5	CancelPenalty		1	Y	
6	PenaltyDescription		1	Y	
7	Text		1	Y	The Cancellation policy for the reservation.
4	Total		0..1	N	The total amount for this reservation excluding the additional amounts for rollaway and crib.
	@AmountAfterTax	Money		Y	The AmountAfterTax attribute will have the total amount charged for the reservation.
	@CurrencyCode	AlphaLength3		Y	The currency in which the total price is returned.

Table 12. OTA_HotelResRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
5	Taxes		1	Y	
6	Tax		1..2	Y	
	@Code	OTA_CodeType		Y	The <i>Code</i> (refer to the OTA Code Fee List type table) identifies the fees applied to the rate, the <i>Code</i> can be either "14 or "17".
	@Amount	Money		Y	If the <i>Code</i> is "14" then the <i>Amount</i> will have the service charges that were applied to the rate and if <i>Code</i> is "17" then the <i>Amount</i> will include all taxes and additional fees that were applied to the rate.
	@CurrencyCode	AlphaLength3		Y	The currency in which the taxes are returned.
4	HotelReservationIDs		0..1	N	The information that was sent in the HotelReservationID element of the OTA_HotelResRQ will be echoed back in the HotelReservationID element of the OTA_HotelResRS along with a HotelReservationID element from HTE if a reservation was made. The attribute ResID_Value in the HotelReservationID element is the confirmation number of the reservation, ResID_Date is the timestamp that the reservation was made in the Hilton reservation system, ResID_Source will be "Hilton" and ResID_Type(refer the OTA Code Table Unique Id list) will be "14".
5	HotelReservationID		1..3	Y	
	@ResID_Value	StringLength1to10		Y	If ResID_Type is 14, ResID_Value will have Hilton's confirmation number, if the ResID_Type="5" then ResID_Value will be client specific confirmation number that was sent in OTA_HotelResRQ. If ResID_Type is 15 then the ResID_Value will be Hilton's cancellation number. This will only be returned in response to OTA_ReadRQ.
	@ResID_Date	xs:dateTime		N	
	@ResID_Source	StringLength1to64		Y	
	@ResID_Type	OTA_CodeType		Y	

7.4 OTA_HotelResRS Examples

Example 1 - This is an example of a successful response to a request to book one room at the Waldorf London Hilton in London, GB. Taxes and service charges are returned in the Tax element. The room stay has a meal plan code of "X" (Executive Floor Breakfast) associated with it.

</OTA_HotelResRS>

```

The OTA_HotelResModifyRQ message is used to make a change to an existing reservation. Before attempting the modification, it may be useful, but not necessary, to perform an OTA_HotelAvailRQ in order to verify that the new date range, room types, etc. are available.

A reservation can only be modified if the following two conditions are met:

- The reservation that you are trying to modify must contain the same account information that was used to make the reservation. (You can't modify a reservation that you didn't make.)
- The OTA_HotelResModifyRQ message must contain the confirmation number of the reservation.

The modification request is an atomic request that can either be approved or denied. If there is a problem modifying the reservation, the OTA_HotelResModifyRS response will return an appropriate business message. For instance, if the reservation requires a deposit and there is no payment information included in the request, it will be denied. Once the request is made and a successful result is returned, the modification requested will have been completed.

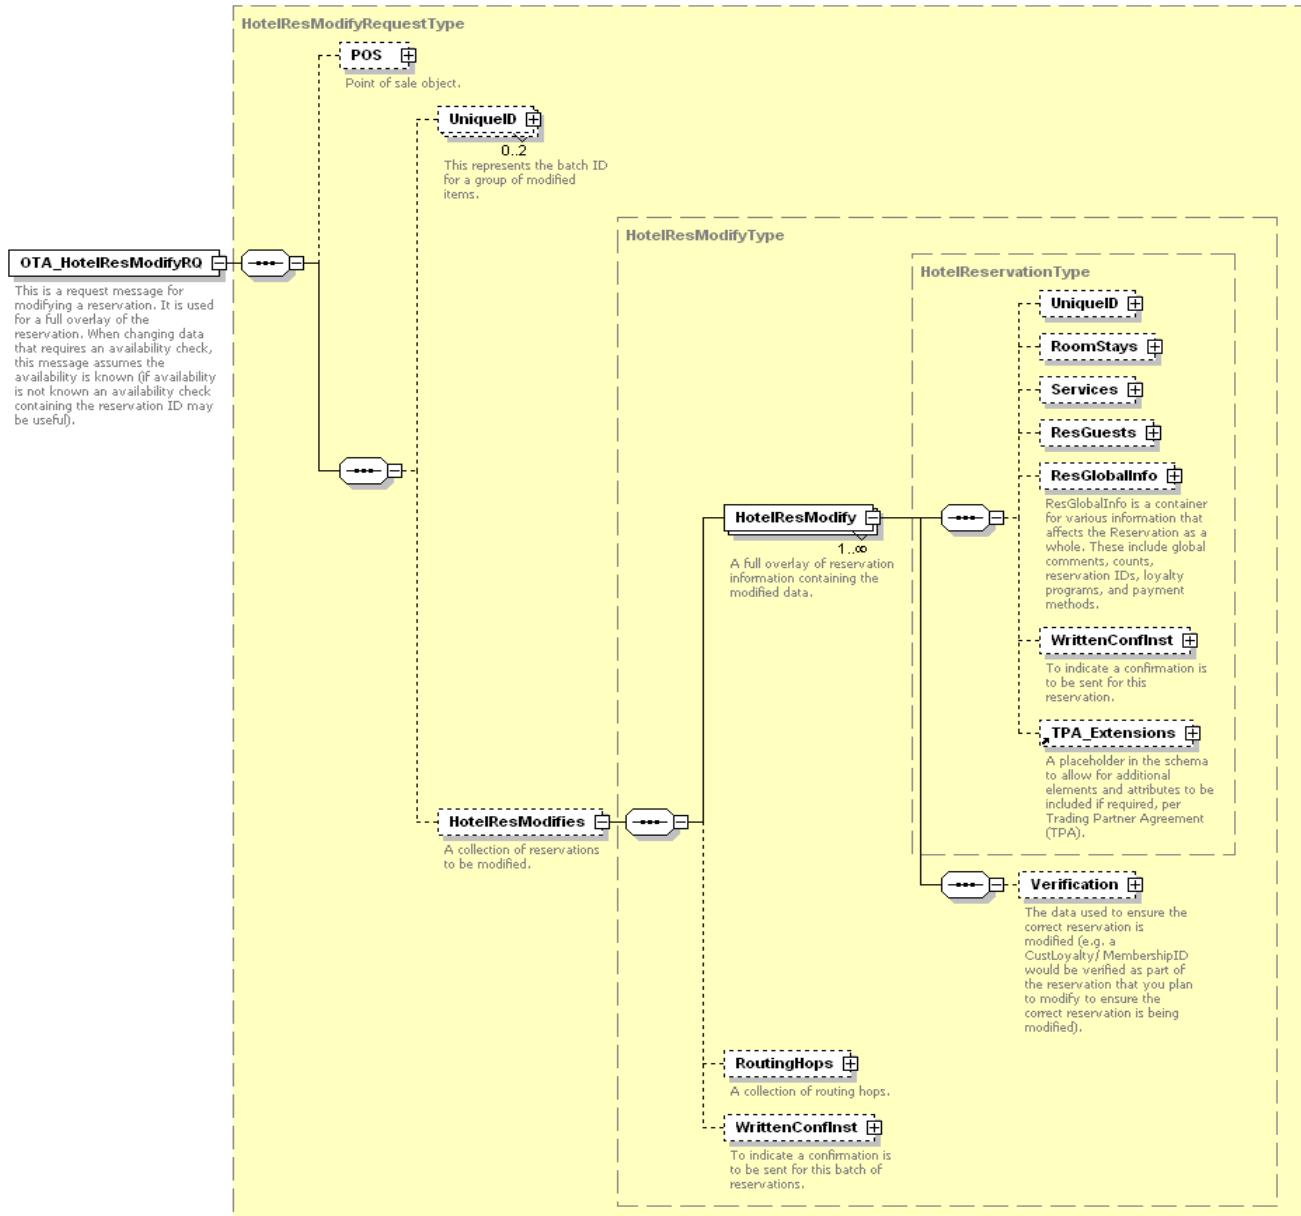

Figure 7. OTA_HotelResModifyRQ Schema

8.1 OTA_HotelResModifyRQ Elements and Attributes

The OTA_HotelResModifyRQ schema is very similar to the OTA_HotelResRQ, except that the element names “HotelReservations” and “HotelReservation” are replaced by the element names “HotelResModifies” and “HotelResModify” respectively.

A modification can be classified as either an “inventory” or “non-inventory” modification. The difference being that an inventory modification may result in a rate change. Elements which will result in a possible inventory change include Room stays, Guest Counts and Time span. Elements which will not result in an inventory change include ResGuests, Membership, Comments and Guarantee elements.

All elements must be re-sent even if they are not being modified. Please note that you are not able to modify any BasicPropertyInfo elements. If attempted, the modification will fail.

Elements can be added or modified but not removed.

Within the Membership element, once a HH membership has been entered, it cannot be deleted or changed. Other memberships can be added or changed but not deleted.

When making a modification, the Hilton confirmation number should be included in the ResID_Value attribute of the HotelReservationID element. Changes or additions are allowed to your unique identifier only.

The following table shows the attributes of the HotelResModifies element that are supported by the Hilton Transaction Exchange.

Table 13. OTA_HotelResModifyRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelResModifyRQ		1	Y	
	@ResStatus	TransactionAction Type		Y	When the ResStatus is set to “Commit”, a modification is being made. In this case, the reservation will either be successful and a modification is made, or an appropriate error response will be returned.
1	HotelResModifies		1	Y	
2	HotelResModify		1	Y	
3	RoomStays		1	Y	Holds information the original/new room stay information.
4	RoomStay		1	Y	
	@PromotionCode	StringLength1to32		N	A promotion code may be requested.
5	RoomTypes		1	Y	
6	RoomType		1	Y	
	@RoomTypeCode	StringLength1to16		Y	
	@NumberOfUnits	Numeric1		Y	The value of this attribute must always be “1”.
7	Amenities		0..1	N	
8	Amenity		1..3	Y	The acceptable RoomAmenity values are either Smoking/Non Smoking or One Bed/Two Beds or Rollaway/Crib
	@RoomAmenity	OTA_CodeType		Y	See Appendix A for the codes.
5	RatePlans		1	Y	
6	RatePlan		1	Y	
	@BookingCode	StringLength1to16		N	
	@RatePlanID	StringLength1to64		N	

Table 13. OTA_HotelResModifyRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	@RatePlanCode	StringLength1to16		Y	
5	BasicPropertyInfo		1	Y	
	@BrandCode	StringLength1to16		N	
	@HotelCode	StringLength1to8		Y	The property for which the booking was made. This cannot be changed.
	@HotelName	StringLength1to128		N	
3	ResGuests		1	Y	Holds the original/new guest information.
4	ResGuest		1	Y	
5	Profiles		1	Y	
6	ProfilesInfo		1	Y	
7	Profile		1	Y	
8	Customer		1	Y	
9	PersonName		1	Y	
10	NamePrefix		0..1	N	
10	GivenName		1	Y	
10	Surname		1	Y	
9	Telephone		1	Y	
	@PhoneNumber	StringLength1to32		Y	
9	Email		0..1	N	Email is optional, if sent it should be in the user@domain format.
	DefaultInd	Boolean		N	If attribute DefaultInd is set to "true" an email confirmation will be sent to the email address provided.

Table 13. OTA_HotelResModifyRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
9	Address		1	Y	
10	AddressLine		1..3	Y	
10	CityName		1	Y	
10	PostalCode		0..1	N	
10	StateProv		0..1	N	
	@StateCode	StateProvCodeType		Y	
10	CountryName		1	Y	
	@Code	ISO3166		Y	
3	ResGlobalInfo		1	Y	
4	GuestCounts		1	Y	
	@IsPerRoom	xs:boolean		Y	<i>IsPerRoom</i> means that the guests defined in the GuestCounts object apply to <i>each</i> room in the NumberOfRooms for the RoomStay. The IsPerRoom attribute must always be “true”.
5	GuestCount		1..2	Y	The GuestCount element contains the age and number of guests for the room. At least one GuestCount element, specifying the number of adults is required. You have to provide at least one GuestCount element, specifying the number of adults. At most two GuestCount elements are allowed: one for the number of adults and one for the number of children.
	@AgeQualifyingCode	OTA_CodeType		Y	The AgeQualifyingCode should either be “10” to specify adult or “8” for a child. (These are the values from the OTA Code List Age Qualifying Code (AQC).)
	@Count	Numeric1to999		Y	The number of guests in each AgeQualifying-

Level	Name	Type	Occurs	Required	Comments
					Code.
4	TimeSpan		1	Y	The TimeSpan element must have the Start and Duration attributes populated or the origina/new reservation.
	<i>@Start</i>	DateOrTimeOr- DateTimeType		Y	The arrival date for the reservation.
	<i>@Duration</i>	DurationType		Y	The length of stay. Should be in the format P[0-90]D.
4	Memberships		0..1	N	Memberships can be added or changed but not deleted.
5	Membership		1..2	Y	
	<i>@AccountID</i>	StringLength1to32		Y	
	<i>@ProgramCode</i>	StringLength1to32		Y	
4	Comments		0..1	N	
5	Comment		1..3	Y	
6	Text		1	Y	
4	Guarantee		1	Y	
	<i>@GuaranteeCode</i>			Y	Either the orginal or new guarantee code needs to be sent in. See Appendix A, Table 1 for a list of possible guarantee codes.
5	GuaranteesAccepted		0..1	N	This element is required only for guarantee policies Credit Card Guarantee (CC), Credit Card Deposit (CR) and Full PrePayment (FP).
6	GuaranteeAccepted		1	Y	
7	PaymentCard		1	Y	The PaymentCard element has four attributes, all of which are required. The payment infor-

Table 13. OTA_HotelResModifyRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					mation could be used to “hold” the reservation or it could be used to pay for the room(s) at the time of the reservation, depending on the guarantee policy of the reservation.
	@CardType	OTA_CodeType		Y	HTE only supports a value of “1” for CardType per the OTA Code ListCard Type (CDT) which stands for “Credit”.
	@CardCode	PaymentCardCode-Type		Y	The two character code of the credit card issuer. See Table 12 for the list of OTA CardCode values.
	@CardNumber	NumericStringLength1to19		Y	The credit card number embossed on the card.
	@ExpireDate	MMYYDate		Y	The expiration date of the credit card.
4	HotelReservationIDs		1	Y	
5	HotelReservationID		1..2	Y	This element is used to identify the reservation the needs to be modified.
	@ResID_Value	StringLength1to10		Y	An identifier that can be used to identify the reservation.
	@ResID_Date	xs:dateTime		Y	Date of the creation of this reservation
	@ResID_Source	StringLength1to64		Y	Name of the source company/system.
	@ResID_Type	OTA_CodeType		Y	If ResID_Type is “14” the ResID_Value needs to be Hilton’s confirmation number. ResID_Type can be set to “5” if a local identifier needs to be sent in ResID_Value.

8.2 OTA_HotelResModifyRQ Examples

Example 1 - This is an example of a request to modify the address on a booking for Waldorf London Hilton. The hotel code is "LONWA" and the brand code for Hilton International is "HI".

The address originally supplied was

```
<Address>
  <AddressLine>123 Main</AddressLine>
  <CityName>London</CityName>
  <CountryName Code="GB"/>
</Address>
```

In this example you can see that all elements that were supplied as part of the original booking have been re-sent as part of the modify request. Note that the Hilton confirmation number and the local unique identifier are also present in the HotelReservationIDs element.

```

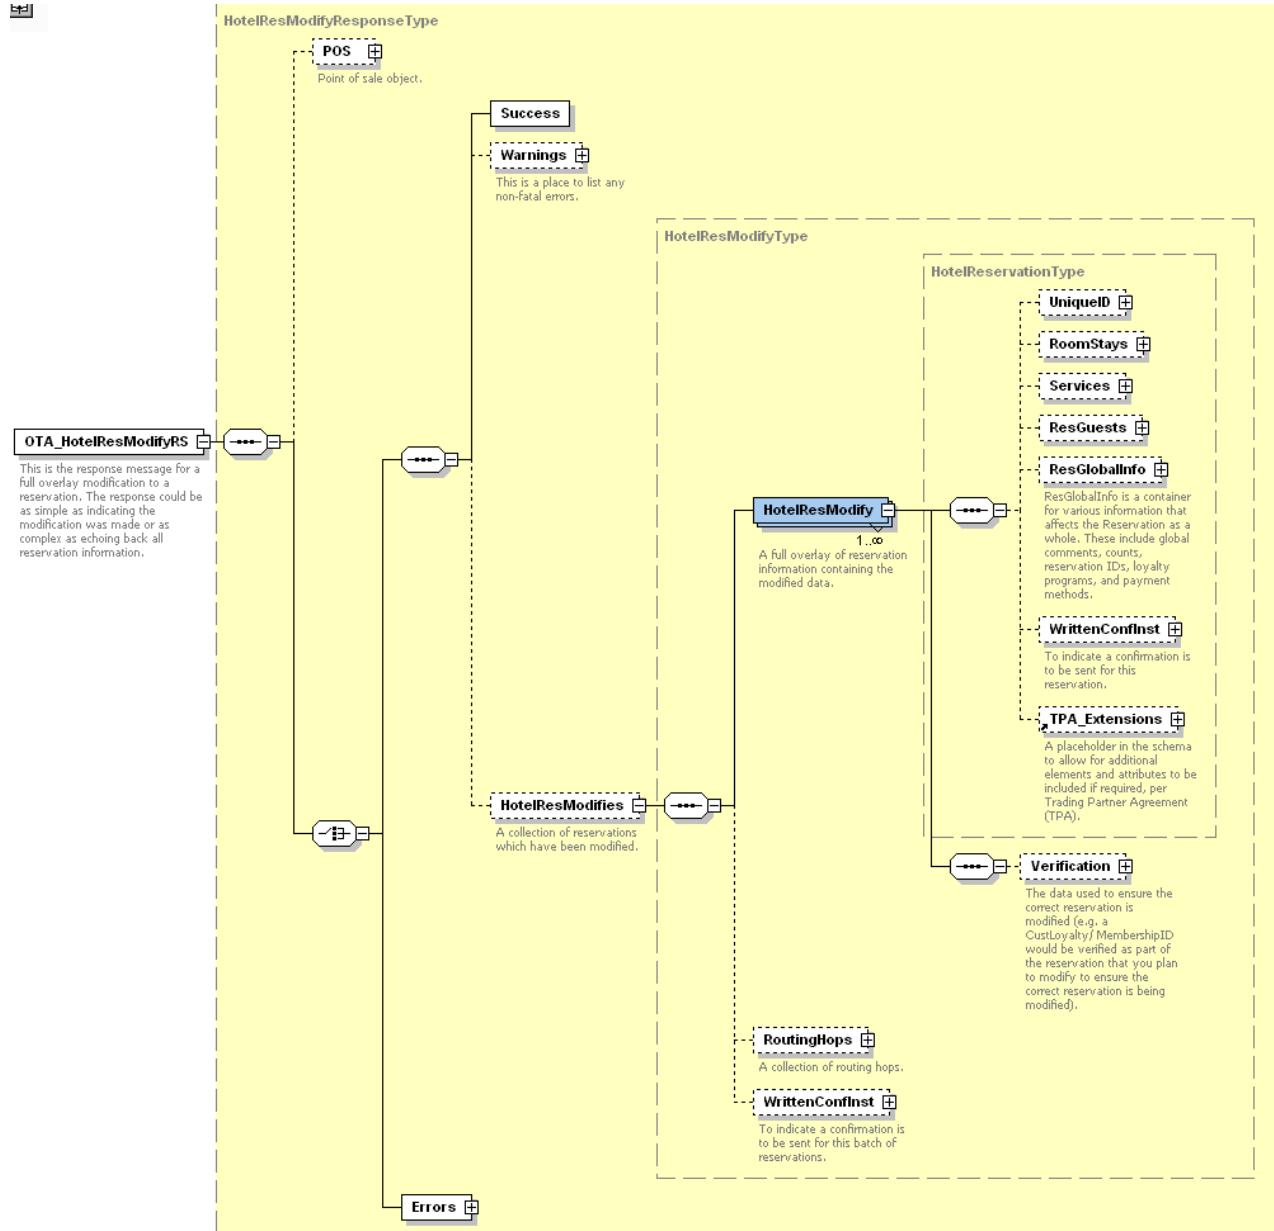

Figure 8. OTA_HotelResModifyRS Schema

8.3 OTA_HotelResModifyRS Elements and Attributes

The OTA_HotelResModifyRS message is identical to the OTA_HotelResRS message, except that the element names “HotelReservations” and “HotelReservation” are replaced by the element names “HotelResModifies” and “HotelResModify”, respectively.

The following table shows the attributes of the OTA_HotelResRS elements that are supported by the Hilton Transaction Exchange.

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelResModifyRS		1	Y	
	@ResResponseType	TransactionStatusType		Y	If the ResStatus within the OTA_HotelResModifyRQ was set to "Commit" then the ResResponseType will be either "Committed" or "Unsuccessful".
1	Success		0..1	N	See section 4.1.2 for more info on Success.
1	Errors		0..1	N	See section 4.1.2 for more info on Errors.
2	Error		1	N	
	@Type	OTA_CodeType		Y	
1	Warnings		0..1	N	See section 4.1.2 for more info on Warnings.
2	Warning		0..n	N	
	@Type	OTA_CodeType		Y	
1	HotelResModifies		0..1	N	This element contains the modified reservation.
2	HotelResModify		1	Y	
3	RoomStays		1	Y	
4	RoomStay		1	Y	
5	RoomTypes		1	Y	
6	RoomType		1	Y	
	@RoomTypeCode	StringLength1to16		Y	
	@NumberOfUnits	Numeric1		Y	
7	RoomDescription		1	Y	

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
8	Text		1	Y	
7	Amenities		0..1	N	
8	Amenity		1	Y	The meal plan code for the reservation will be returned this element. See Appendix A, Table 4 for an explanation of the meal plan codes.
	<i>@RoomAmenity</i>	OTA_CodeType		Y	Will always be “8” for MealPlan. See Appendix A, Table 6 .
5	RatePlans		1	Y	
6	RatePlan		1	Y	
	<i>@RatePlanCode</i>	StringLength1to16		Y	
7	RatePlanDescription		1	Y	
8	Text		1	Y	
5	RoomRates		1	Y	
6	RoomRate		1	Y	
	<i>@EffectiveDate</i>	xs:date		Y	
	<i>@ExpireDate</i>	xs:date		Y	
	<i>@RoomTypeCode</i>	StringLength1to16		Y	
	<i>@RatePlanCode</i>	StringLength1to16		Y	
	<i>@PromotionCode</i>	StringLength1to32		N	
7	Rates		1	Y	
8	Rate		1..n	Y	If there is a rate change, then more than one

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					Rate element will be returned. For instance, an availability check for January 1 st through the 10 th may yield one room rate for January 1 st through the 5 th and a different rate for the 6 th through the 10 th . In this case, there would be two Rate elements.
	@EffectiveDate	xs:date		Y	The starting date from when the rate returned in the Base element is applicable.
	@ExpireDate	xs:date		Y	Indicates the date when the rate in the Base element expires.
	@RateTimeUnit	TimeUnitType		Y	Will always be "Day". Since the rate returned in the Base element is the daily rate.
9	Base		1	Y	Either the AmountBeforeTax or AmountAfter-Tax will be returned.
	@AmountBeforeTax	Money		N	The AmountBeforeTax attribute contains the base dollar amount of the rate per room per night excluding taxes.
	@AmountAfterTax	Money		N	The AmountAfterTax attribute is the entire amount of the stay including applicable taxes.
	@CurrencyCode	AlphaLength3		Y	The currency in which the rates are returned.
9	AdditionalGuestAmounts		0..1	N	This element is returned only if Rollaway or crib was requested in OTA_HotelResRQ and if the room type supports an extra bed.
10	AdditionalGuestAmount		1..2	Y	
11	Amount		1	Y	Either the AmountBeforeTax or AmountAfter-Tax will be returned.
	@AdditionalFeesExcludedI			Y	Will always be "true" since the additional rates

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
	ndicator				are not included in the total price of the room.
	@CurrencyCode				The currency in which the rates are returned.
	@AmountBeforeTax				
	@AmountAfterTax				
11	AddlGuestAmtDescription		1	Y	
12	Text		1	Y	A description of the additional charge.
5	BasicPropertyInfo		1	Y	
	@BrandCode	StringLength1to16		N	
	@HotelCode	StringLength1to8		Y	
	@HotelName	StringLength1to128		N	
3	ResGuests		1	Y	The guest information sent in OTA_HotelResRQ is echoed back in the response.
4	ResGuest		1	Y	
5	Profiles		1	Y	
6	ProfileInfo		1	Y	
7	Profile		1	Y	
8	Customer		1	Y	
9	PersonName		1	Y	
10	NamePrefix		0..1	N	
10	GivenName		1	Y	

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
10	Surname		1	Y	
9	Telephone		1	Y	
	@PhoneNumber	StringLength1to32		Y	
9	Email		0..1	N	
9	Address		1	Y	
10	AddressLine		1..3	Y	
10	CityName		1	Y	
10	PostalCode		0..1	N	
10	StateProv		0..1	N	
	@StateCode	StateProvCodeType		Y	
10	CountryName		1	Y	
	@Code	ISO3166		Y	
3	ResGlobalInfo		1	Y	
4	GuestCounts		1	Y	Information about the number of guests per room.
	@IsPerRoom	xs:boolean		Y	<i>IsPerRoom</i> means that the guests defined in the GuestCounts object apply to <i>each</i> room in the NumberOfRooms for the RoomStay. The IsPerRoom attribute must always be “true”.
5	GuestCount		1..2	Y	
	@AgeQualifyingCode	OTA_CodeType		Y	
	@Count	Numeric1to999		Y	
4	TimeSpan		1	Y	

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
	@Start	DateOrTimeOr- DateTimeType		Y	
	@Duration	DurationType		Y	
4	Memberships		0..1	N	Holds information regarding the Memberships associated with the reservation.
5	Membership		1..2	Y	
	@AccountId	StringLength1to32		Y	
	@ProgramCode	StringLength1to32		Y	
4	Comments		0..1	N	Comments associated with the reservation.
5	Comment		1..3	Y	
6	Text		1	Y	
4	Guarantee		1	Y	
5	GuaranteeDescription		1	Y	
6	Text		1	Y	Description of the guarantee method used to hold the reservation.
4	CancelPenalties		1	Y	
5	CancelPenalty		1	Y	
6	PenaltyDescription		1	Y	
7	Text		1	Y	The Cancellation policy for the reservation.
4	Total		1	Y	The total amount for this reservation excluding the additional amounts for rollaway and crib.
	@AmountAfterTax	Money		Y	The AmountAfterTax attribute will have the

Table 14. OTA_HotelResModifyRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					total amount charged for the reservation.
	@CurrencyCode	AlphaLength3		Y	The currency in which the total price is returned.
5	Taxes		1	Y	
6	Tax		1..2	Y	
	@Type	OTA_CodeType		Y	The <i>Code</i> (refer to the OTA Code Fee List type table) identifies the fees applied to the rate, the <i>Code</i> can be either “14 or “17”.
	@Amount	Money		Y	If the <i>Code</i> is “14” then the <i>Amount</i> will have the service charges that were applied to the rate and if <i>Code</i> is “17” then the <i>Amount</i> will include all taxes and additional fees that were applied to the rate.
	@CurrencyCode	AlphaLength3		Y	The currency in which the taxes are returned.
4	HotelReservationIDs		1	Y	
5	HotelReservationID		1..2	Y	The information that was sent in the HotelReservationID element of the OTA_HotelResModifyRQ will be echoed back in the HotelReservationID element of the OTA_HotelResRS.
	@ResID_Value	StringLength1to10		Y	
	@ResID_Date	xs:dateTime		N	
	@ResID_Source	StringLength1to64		Y	
	@ResID_Type	OTA_CodeType		Y	

8.4 OTA_HotelResModifyRS Examples

Example 1 - This is an example of a successful response to a request to modify a reservation from 2 to 3 nights. The original elements were:

```
<Total CurrencyCode="GBP" AmountAfterTax="538.15">
  <Taxes>
    <Tax Code="14" Amount="0.00" CurrencyCode="GBP"/>
    <Tax Code="17" Amount="80.15" CurrencyCode="GBP"/>
  </Taxes>
</Total>

OTA_Read

The Read infrastructure action defines an operation that opens an existing record and transmits information contained in that record. The Read operation enables the user to identify a particular record and retrieve its entire contents. The Read request will query the Hilton reservation system by using specific booking identifiers included in the UniqueID and Verification elements. The Hilton Transaction Exchange uses the OTA_HotelResRS message as the response to the OTA_ReadRQ. There is no OTA_ReadRS message.

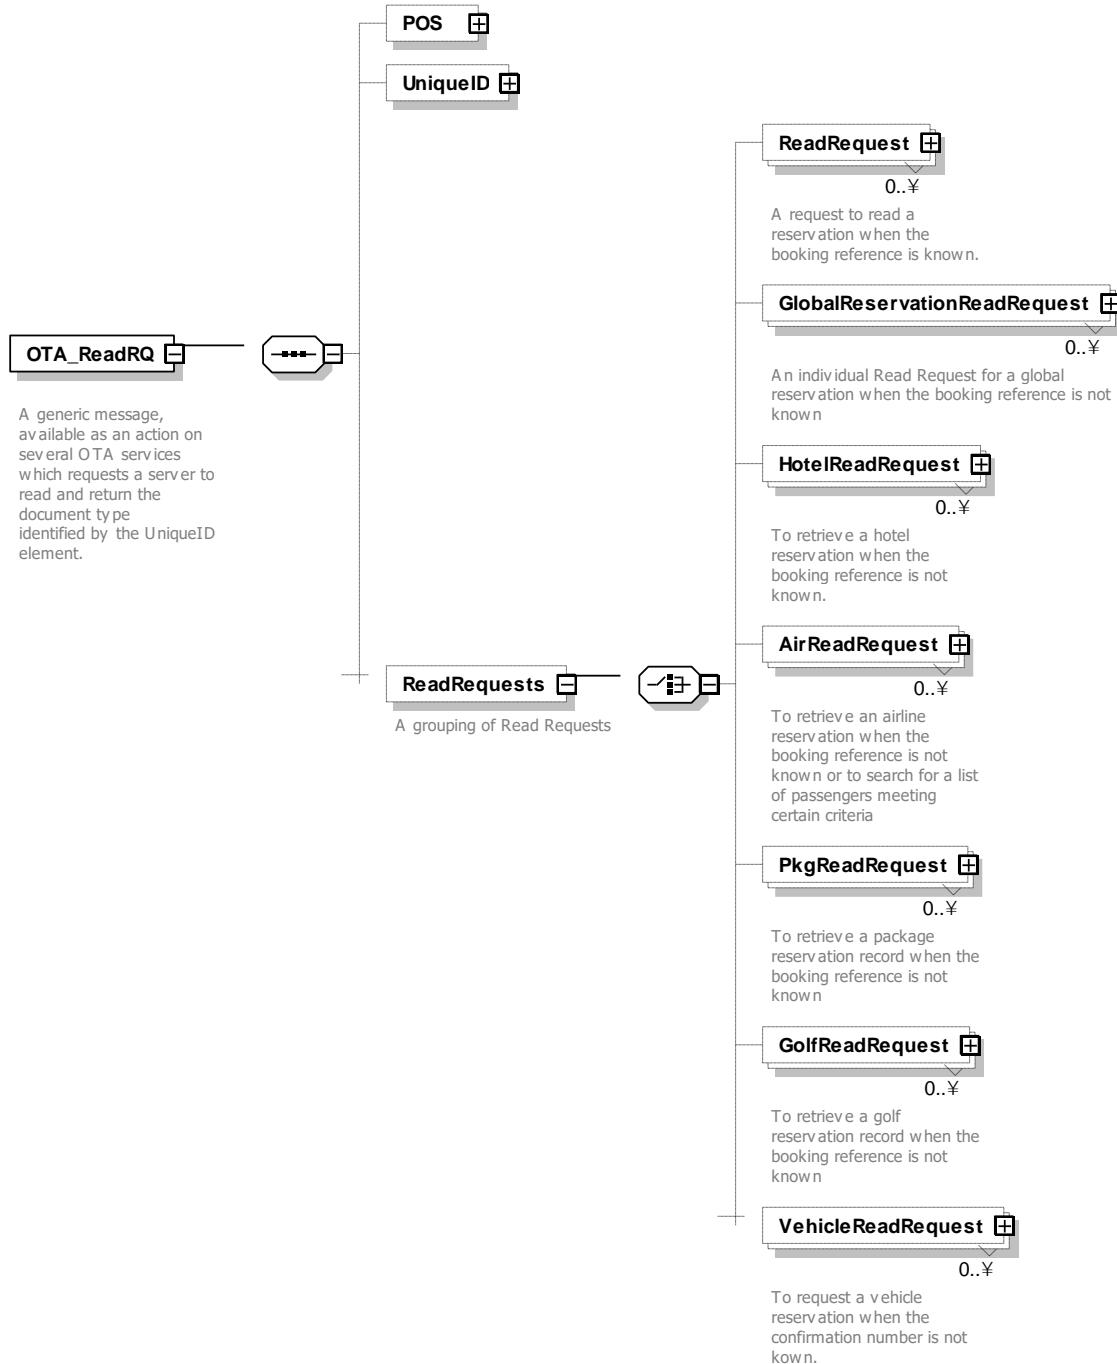

Figure 9. OTA_ReadRQ Schema

9.1 OTA_ReadRQ Elements and Attributes

The following table shows the attributes of the OTA_ReadRQ that are supported by the Hilton Transaction Exchange.

Table 15. OTA_ReadRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_ReadRQ		1	Y	
1	ReadRequests		1	Y	
2	ReadRequest		1	Y	
3	UniqueID		1	Y	
	@Type	OTA_CodeType	1	Y	The value of <i>Type</i> should be “14”, (according to the OTA Code List Unique ID Type) which signifies that the ID is a Hilton reservation number
	@ID	StringLength1to32	1	Y	The <i>ID</i> value will be the actual Hilton reservation number.
4	CompanyName		1	Y	Should always be set to “Hilton”.
3	Verification		1	Y	
4	PersonName		1	Y	
5	Surname		1	Y	Last name of the person whose name is on the reservation.

9.2 OTA_ReadRQ Example

Example1 – This example is requesting a Hilton reservation with a confirmation number of 3306515008 and a last name of MOUSE.

```
<OTA_ReadRQ TimeStamp="2008-03-18T13:35:05.627" Target="Production" Version="3.0"
    PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
    <ReadRequests>
        <ReadRequest>
            <UniqueID Type="14" ID="3306515008">
                <CompanyName>Hilton</CompanyName>
            </UniqueID>
            <Verification>
                <PersonName>
                    <Surname>MOUSE</Surname>
                </PersonName>
            </Verification>
        </ReadRequest>
    </ReadRequests>
</OTA_ReadRQ>
```

9.3 OTA_Read Response Example

Example 1 - The response to the OTA_ReadRQ transaction is the OTA_HotelResRS. Below is the response to the request shown in Example 1.

```
<OTA_HotelResRS xmlns="http://www.opentravel.org/OTA/2003/05" Target="Test" PrimaryLangID="en-us" Version="3.0" ResResponseType="Ignored" TimeStamp="2008-03-31T17:15:16.58-05:00">

OTA_Cancel

The OTA_CancelRQ/RS messages are used to cancel a previously made reservation. The request will cancel the entire reservation.

A reservation can only be cancelled if the following conditions are met:

- The reservation was made by you.
- The OTA_CancelRQ message contains the confirmation number of the reservation.
- If the terms and conditions of the rate allow it.

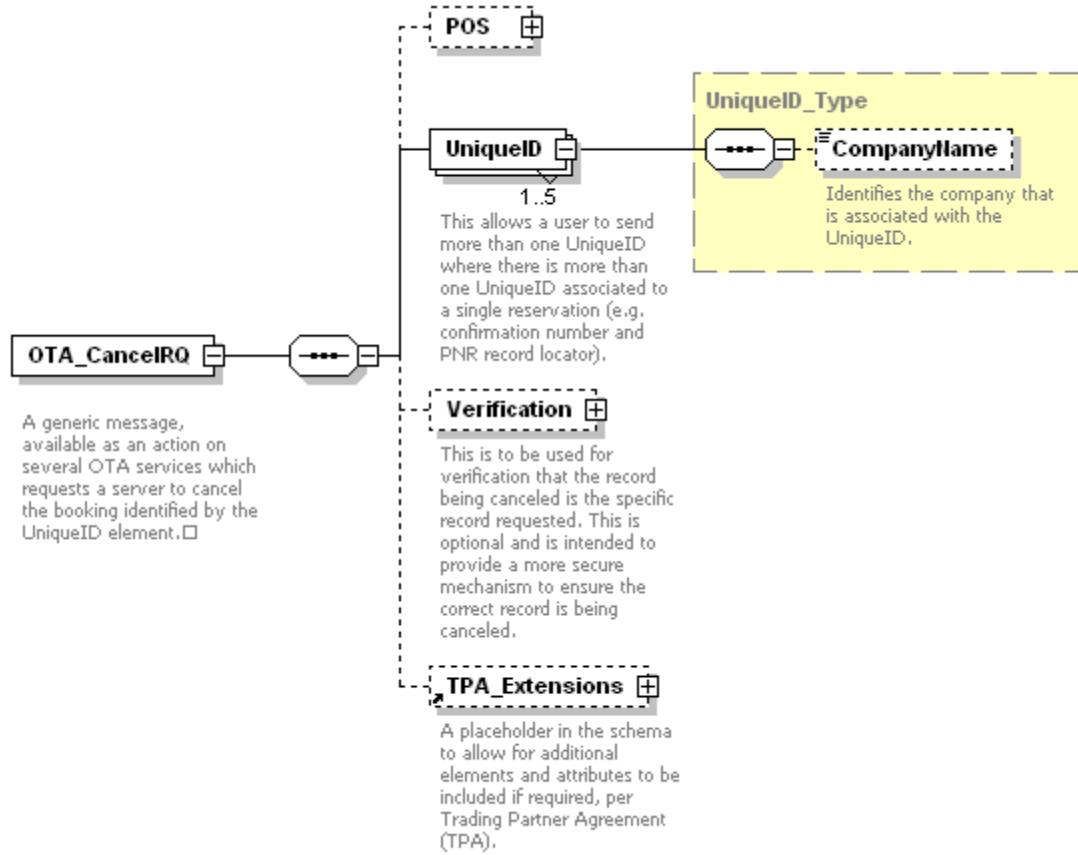

Figure 10. OTA_CancelRQ Schema

8.1 OTA_CancelRQ Elements and Attributes

In the OTA_CancelRQ message, the CancelType attribute should always be “Commit”. No partial or pending cancellations are allowed.

Table 15. OTA_CancelRQ Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_CancelRQ		1	Y	
	@CancelType	TransactionAction-Type		Y	If the <i>CancelType</i> is <i>not</i> set to “Commit”, the cancel request will be ignored.
1	UniqueId		1..2	Y	There can be two occurrences of the UniqueID element. One to contain the confirmation number generated by HTE which is <i>required</i> , and the other for any identifier that you maintain for the reservation on your side which is <i>optional</i> .
	@ID	StringLength1to32		Y	The <i>ID</i> value will be the actual Hilton reservation number (<i>required</i>) or the client specific confirmation number. (NOTE: If a client specific ID is used, it <i>must</i> match the HotelReservationID ResID_Value that was sent in the ResRQ or it must be left blank).
	@Type	OTA_CodeType		Y	The value of the <i>Type</i> should either be “14”, (according to the OTA Code List Unique ID Type) which signifies that the ID is a Hilton reservation number, or a “5” to send in your identifier.
2	CompanyName		1	Y	
1	Verification		1	Y	Verification is the container element for the cancellation verification information. Guest name, Property information and the time span of reservation need to be sent in the Verification element to ensure that the

Table 15. OTA_CancelRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
					correct booking is being cancelled.
2	PersonName		1	Y	
3	GivenName		1	Y	
3	Surname		1	Y	
2	Vendor		2	Y	The Vendor element is used to send in the property information.
	@Code	StringLength1to8		Y	The possible values for Vendor@Code are "2" for BrandCode and "3" for HotelCode.
2	Reservation-TimeSpan		1	Y	
	@Start	DateOrTimeOr-DateTimeType		Y	
	@Duration	DurationType		Y	

Example 1 - The following is an example of an OTA_CancelRQ. "12345" is the identifier used by the customer "MYTRAVEL" sending in the transaction. This information will be echoed back in the reply transaction. "3296390004" is the confirmation number that was returned by the Hilton Transaction Exchange in the OTA_HotelResRS transaction which is required for the reservation to be cancelled.

```
<OTA_CancelRQ CancelType="Commit"TimeStamp="2008-03-20T10:14:49.618" Target="Production" Version="3.0" PrimaryLangID="en-us"
  xmlns="http://www.opentravel.org/OTA/2003/05">

    <CompanyName>MYTRAVEL</CompanyName>
  </UniqueID>
  <UniqueID Type="14" ID="3296390004">
    <CompanyName>Hilton</CompanyName>
  </UniqueID>
  <Verification>
    <PersonName>
      <GivenName>Ben</GivenName>
      <Surname>Smith</Surname>
    </PersonName>
    <Vendor Code="2">HI</Vendor>
    <Vendor Code="3">LONWA</Vendor>
    <ReservationTimeSpan Start="2008-09-12" Duration="P3D" />
  </Verification>
</OTA_CancelRQ>
```

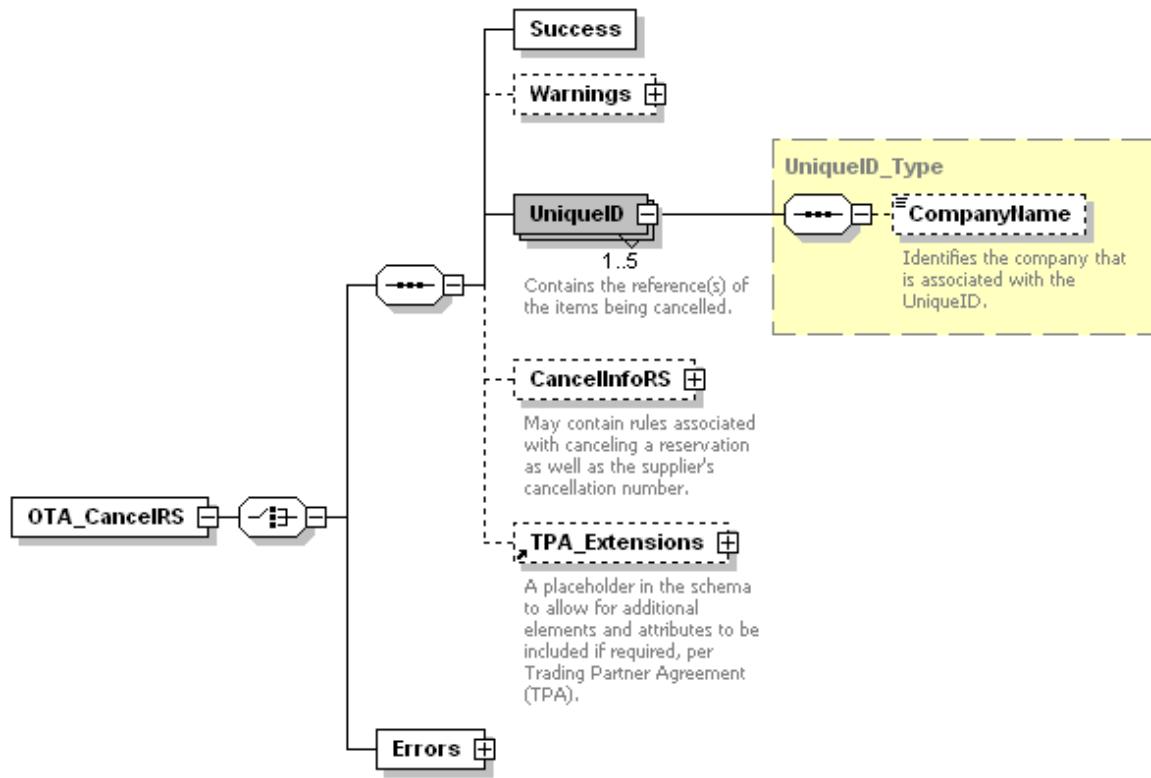

Figure 11. OTA_CancelRS Schema

8.2 OTA_CancelRS Elements and Attributes

The OTA_CancelRS message will indicate either the cancellation was successful or it was not. If the reservation was successfully cancelled, a <Success/> element and a cancellation number will be provided.

The following table shows the attributes of the OTA_HotelDescriptiveInfoRS that are supported by the Hilton Transaction Exchange.

Table 16. OTA_CancelRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
0	OTA_CancelRS		1	Y	
	@Status	TransactionStatusType	1	Y	OTA_CancelRS@Status will be “Cancelled” if the cancellation was successful or “Unsuccessful” if the cancellation was not successful.
1	Success		0..1	N	
1	Errors		0..1	N	See section 4.1.2 for more info on errors.
2	Error		1	Y	
	@Type	OTA_CodeType		Y	
1	Warnings		0..1	N	See section 4.1.2 for more info on warnings.
2	Warning		1	Y	
	@Type	OTA_CodeType		Y	
1	UniqueId		0..2	N	
	@ID	StringLength1to32	1	Y	Client identifier.
	@Type	OTA_CodeType	1	Y	Type of the client should be set to “5”.
2	CompanyName		1	Y	
1	CancelInfoRS		0..1	N	
2	UniqueId		1	Y	The UniqueID elements that were sent in the OTA_CancelRQ will be echoed back in the UniqueID elements in OTA_CancelRS element.
	@ID	StringLength1to32	1		If the cancellation was successful then the UniqueID@ID will contain the Hilton cancellation number.

Table 16. OTA_CancelRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	<i>@Type</i>	OTA_CodeType	1		If the cancellation was successful then the UniqueID@Type attribute of “15” (according to the OTA Code List Unique ID Type (UIT)) will be returned.
3	CompanyName		1	Y	Should be set to “Hilton”.

The following examples are two possible OTA_CancelRS responses.

Example 1 - The response below indicates that a reservation with a Hilton confirmation number of 3296390004 was successfully cancelled by MYTRAVEL company. The Hilton cancellation number of 84060789 was returned.

```
<OTA_CancelRS xmlns="http://www.opentravel.org/OTA/2003/05" Target="Test"
  PrimaryLangID="en-us" Version="3.0" TimeStamp="2008-03-20T11:43:31.11-05:00" Sta-
  tus="Cancelled">
  <Success />
  <UniqueID ID="12345" Type="5">
    <CompanyName>MYTRAVEL</CompanyName>
  </UniqueID>
  <UniqueID ID="3296390004" Type="14">
    <CompanyName>Hilton</CompanyName>
  </UniqueID>
  <CancelInfoRS>
    <UniqueID ID="84060789" Type="15">
      <CompanyName>Hilton</CompanyName>
    </UniqueID>
  </CancelInfoRS>
</OTA_CancelRS>
```

Example 2 - If the cancellation was not successful, an <Error> element will be provided and it will include the reason why the reservation could not be cancelled. An Error Type value of "3" indicates a "Biz rule" according to the OTA Code List Error Warning Type (EWT).

```
<OTA_CancelRS xmlns="http://www.opentravel.org/OTA/2003/05" Target="Test"
  PrimaryLangID="en-us" Version="3.0" TimeStamp="2008-03-20T11:14:49.88-05:00" Sta-
  tus="Unsuccessful">
  <Errors>
    <Error Type="3">USER NOT AUTHORIZED TO MOD/CANCEL THIS BOOKING</Error>
  </Errors>
</OTA_CancelRS>
```

The OTA_HotelDescriptiveInfoRQ/RS messages are used to provide detailed descriptive information about a hotel property. The OTA_HotelDescriptiveInfoRQ message must contain the hotel property's HotelCode. The OTA_HotelDescriptiveInfoRS message is intended to provide detailed information regarding a property's service offerings, amenities, and area information, as well as policies and local contact information. The maximum number of HotelCodes that can be requested in a single request to the Hilton Transaction Exchange is limited to 25.

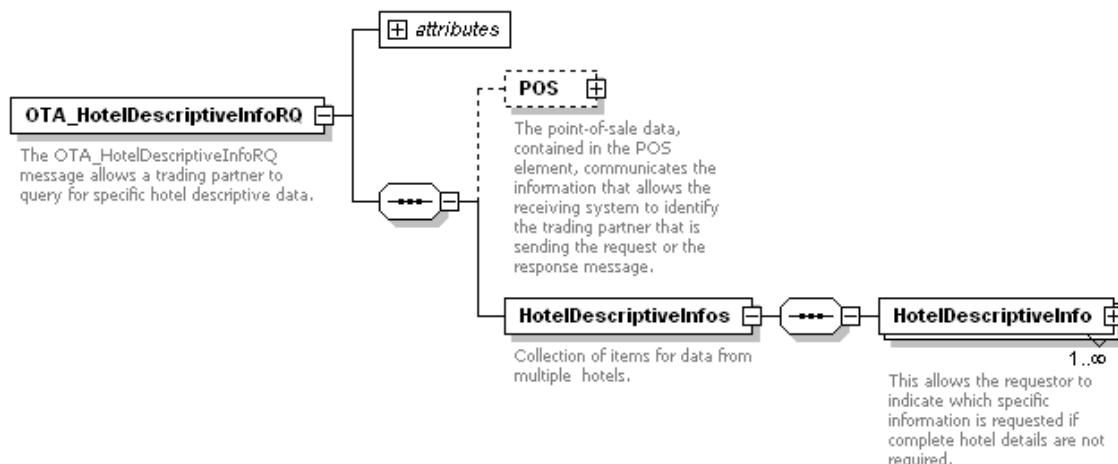

Figure 12. OTA_HotelDescriptiveInfoRQ Schema

11.1 OTA_HotelDescriptiveInfoRQ Elements and Attributes

The OTA_HotelDescriptiveInfoRQ message is used to gain descriptive information regarding a particular property by simply providing the property's HotelCode.

The following table shows the supported attributes and elements for this request.

Table 17. OTA_HotelDescriptiveInfoRQ Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelDescriptiveInfoRQ		1	Y	
1	HotelDescriptiveInfos		1	Y	
2	HotelDescriptiveInfo		1..25	Y	
	<i>@ HotelCode</i>	StringLength1to8		Y	Five character Hilton hotel code.

The following is an example of a request for Hotel Descriptive Information:

```
<OTA_HotelDescriptiveInfoRQ TimeStamp="2008-03-16T19:08:49.589" Target="Production"
Version="3.0" PrimaryLangID="en-us" xmlns="http://www.opentravel.org/OTA/2003/05">
  <HotelDescriptiveInfos>
    <HotelDescriptiveInfo HotelCode="NYCDT" />
  </HotelDescriptiveInfos>
</OTA_HotelDescriptiveInfoRQ>
```

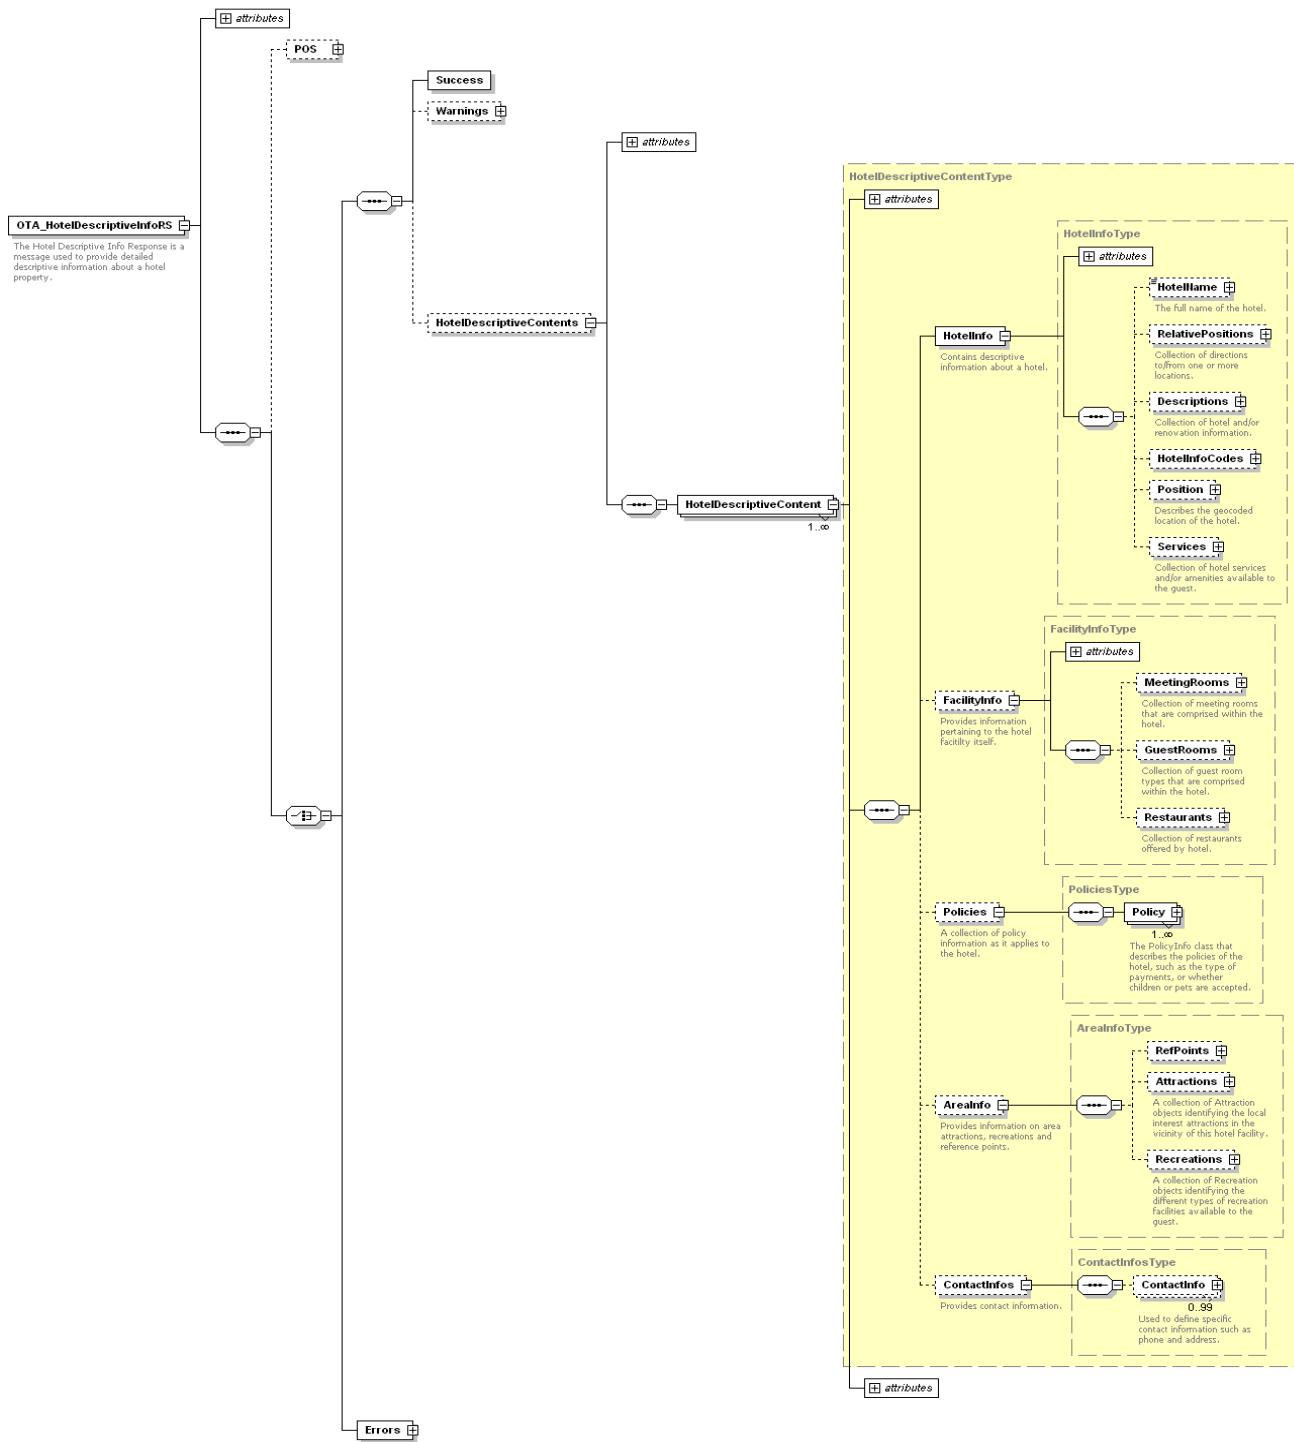

Figure 13. OTA_HotelDescriptiveInfoRS Schema

11.2 OTA_HotelDescriptiveInfoRS Elements and Attributes

The following table shows the attributes of the OTA_HotelDescriptiveInfoRS that are supported by the Hilton Transaction Exchange.

Table 18. OTA_HotelDescriptiveInfoRS Elements and Attributes					
Level	Name	Type	Occurs	Required	Comments
0	OTA_HotelDescriptiveInfoRS		1	Y	
1	Success		0..1	N	See section 4.1.2 for more info on success.
1	Errors		0..1	N	See section 4.1.2 for more info on errors.
2	Error		1	Y	
	@Type	OTA_CodeType		Y	
1	Warrnings		0..1	N	See section 4.1.2 for more info on warnings.
2	Warning		1	Y	
	@Type	OTA_CodeType		Y	
1	HotelDescriptiveContents		0..1	N	
2	HotelDescriptiveContent		1..25	Y	
	@ HotelCityCode	StringLength1to8		N	Seven character hotel code (includes a two character brand code at the end).
	@ HotelName	StringLength1to128		Y	Name of the hotel.
	@ ChainCode	StringLength1to8		Y	Hilton specific chain code. For mapping assistance, see the Brand vs Chain code table in Appendix A, Table 7 .
	@ HotelCode	StringLength1to8		Y	Five character hotel code.
3	HotellInfo		1	Y	
4	CategoryCodes		0..1	N	
5	SegmentCategory		1..n	Y	This element will be returned for a resort property.

Table 18. OTA_HotelDescriptiveInfoRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
	<i>@CodeDetail</i>				@CodeDetail will always be 12
	<i>@Code</i>				@Code will always be "Resort"
4	Descriptions		1	Y	
5	Description		1	Y	
6	Text		1	Y	Detailed description of the hotel.
6	URL		1	Y	URL of the hotel.
4	Position		1	Y	
	<i>@Latitude</i>	StringLength1to16	1	Y	Latitude coordinates of the hotel.
	<i>@Longitude</i>	StringLength1to16	1	Y	Longitude coordinates of the hotel.
4	Services		0..n	N	Describes hotel amenities.
5	Service		1..n		
	<i>@CodeDetail</i>	StringLength1to64		N	Description of the hotel amenity as per the OTA_CodeTable Hotel Amenity Code (HAC) table.
	<i>@Code</i>	OTA_CodeType		N	Hotel amenity code as per the the OTA_CodeTable Hotel Amenity Code (HAC) table.
	<i>@ProximityCode</i>	ProximityType		N	Possible values are onsite and offsite.
	<i>@BusinessServiceCode</i>	OTA_CodeType		N	Business service code as per the the OTA_CodeTable Business Srv Type table.
3	FacilityInfo		0..n	N	
	<i>@LastUpdated</i>	dateTime		Y	Date the hotel information was last updated.
4	GuestRooms		0..1	N	
5	GuestRoom		0..n	N	
6	Amenities		0..1	N	Describes room amenities.

Table 18. OTA_HotelDescriptiveInfoRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
7	Amenity		0..n	N	
	@ CodeDetail	StringLength1to64		Y	Description of the room amenity as per the OTA_CodeTable Room Amenity Type (RMA) table.
	@ RoomAmenityCode	OTA_CodeType		Y	Room amenity code as per the the OTA_CodeTable Room Amenity Type (RMA) table.
	@ProximityCode	ProximityType		Y	Possible values are onsite and offsite.
3	Policies		0..1	N	
4	Policy		1..n	Y	
5	PolicyInfo		0..1	N	
	@ CheckInTime	TimeOrDateTimeType		Y	Hotel check in time.
	@ CheckOutTime	TimeOrDateTimeType		Y	Hotel check out time.
3	AreaInfo		0..1	N	
4	Recreations		0..1	N	
5	Recreation		1..n	Y	Describes the recreations available at the hotel.
	@ CodeDetail	StringLength1to64		Y	Description of the recreation as per the OTA_CodeTable Recreation Srvc Type (RST) table.
	@ Code	OTA_CodeType		Y	Recreation code as per the the OTA_CodeTable Recreation Srvc Type (RST) table.
	@ProximityCode	ProximityType		Y	Possible values are onsite and offsite.
3	ContactInfos		0..1	N	
4	ContactInfo		1	Y	

Table 18. OTA_HotelDescriptiveInfoRS Elements and Attributes

Level	Name	Type	Occurs	Required	Comments
5	Addresses		1	Y	
6	Address		1	Y	
7	AddressLine		1..3	Y	
7	CityName		1	N	
7	PostalCode		0..1	N	
7	StateProv		0..1	N	
7	CountryName		1	N	
5	Phones		1	Y	
6	Phone		1..2	Y	Provides the phone numbers and technology types available at the hotel.
	@ PhoneNumber	StringLength1to32	1	N	Phone numbers of the hotel.
	@ PhoneTechType	OTA_CodeType	1	N	Phone code as per the the OTA_CodeTable Phone Technology Type (PTT) table. A value of "1" indicates a voice number and a value of "3" indicates a fax number.

An example of a successful response:

<HotellInfo>
<Descriptions>
<Description>
<Text>The Doubletree Metropolitan Hotel New York City, located at Lexington Avenue and 51st Street in the heart of Midtown Manhattan's fashionable East Side, is walking distance from Park Avenue, Rockefeller Center and the Broadway Theater District. Recently renovated with 21st century amenities and restored to reflect its retro, 1960's glory, the Doubletree Metropolitan is still the ideal place to stay in the Big Apple. Business travelers enjoy the convenience of being in the center of the midtown business district, surrounded by Fortune 500 companies. We offer a full slate of business support services like meeting rooms, a well-appointed Business Center, equipment rentals and high-speed internet access. Walk to world-class shopping on Fifth Avenue and the shops of Madison Avenue, as well as to entertainment attractions like the NBC Studio Tour, Broadway shows and Radio City Music Hall. We're close to everything that is New York City - Central Park, St. Patrick's Cathedral, the United Nations, The Empire State Building, and Grand Central Station. Do NYC in style from the Doubletree Metropolitan! See and be seen at afternoon tea or with evening cocktails at chic and trendy The Met Bar. Dine at The Met Grill, serving up elegant cuisine in popular surroundings for breakfast, lunch and dinner daily. Work out in our fitness center or be styled in our Salon. Get pampered at the Doubletree Metropolitan. Our Concierge and attentive staff members will attend to your every need, and your comfort is guaranteed. As always - enjoy our very special warm chocolate chip cookie at check-in!</Text>

13 WSDL

13.1 Introduction

The Web Services Definition Language (WSDL) is an XML format for describing web services and how to access them. It specifies the location of the service and the operations (or methods) the service exposes. This section explains how the WSDL's are created for services based on Open Travel Alliance (OTA) XML schema specifications.

“Contract-first” style of service design is followed for maximum service interoperability. Contract-first design can be considered akin to “interface-first” design, whereby the service interface is designed *before* development begins rather than generated from code. The WSDL files will greatly reduce time and complexity of consuming web services thus helping OTA implementers to quickly develop/automatically generate client applications.

13.2 WSDL Definition

A WSDL file defines services as collections of network endpoints, or ports. The protocol and data format specification for a particular port type constitutes a reusable binding. A port is defined by associating a network address with a reusable binding, and a collection of ports define a service. Hence, a WSDL file uses the following elements in the definition of network services:

- Types— a container for data type definitions using some type system (such as XSD).
- Message—definition of the data being communicated.
- Operation—description of an action supported by the service.
- Port Type—set of operations supported by one or more endpoints.
- Binding—protocol and data format specification for a particular port type.
- Port— a single endpoint defined as a combination of a binding and a network address.
- Service— a collection of related endpoints.

13.3 HTE WSDL

WSDL is logically divided into two files, namely the interface definition wsdl file and the binding implementation wsdl file. The interface definition wsdl file describes data types and messages supported by the service. The implementation binding wsdl file defines the implementation specifics such as the transport and binding information for a given service. *These files including the schemas are bundled into a zip file together with sample SOAP request xml files as an XMLSpy project that can be emailed to you upon request from Hilton.* The

WSDL files are organized into the following three components:

- XML schemas are placed in separate files.
- WSDL message abstractions are placed in a separate interface definition wsdl file.
- Service bindings are placed in a separate implementation binding wsdl file.

How import is leveraged here:

- Service bindings import the message definitions
 - Uses <wsdl:import> to import definitions
- Message definitions import the schemas
 - Uses <xsd:import> to import definitions

Figure 16. Schema\WSDL Modular Design

The key benefits of this modular WSDL design:

- Fits model where XSD/WSDL are created independently.
- Easier to manage and maintain.
- Addresses situations where XML schemas already exist.
- Increases reusability of schemas across projects.

13.3.1 Interface Definition WSDL file

The interface definition wsdl file refers only to the data types and message operations already defined by HTE schemas. Each of the interface definition wsdl file imports a unique combination of HTE message schemas.

The sample below shows an interface definition wsdl file for a Hotel Search message. While the HTE schemas themselves can be included in the <types> section of the WSDL, the schemas have been imported (referenced) in order to reduce the size and complexity of the WSDL, and to adhere to modular WSDL design. In the example below, the import element is qualified as “xs:import” where the xs: prefix is associated with the W3C schema namespace. The WSDL specification allows for importing of both schema files and other WSDL files. Since in this case the imported file is a schema, the WS-I recommends that the “import” element be qualified with a namespace prefix indicating that the import statement refers to the W3C schema xs:import rather than a WSDL wsdl:import.

13.3.1.1 Interface Definition WSDL file components

The interface definition WSDL file is comprised of the following parts.

- **Definitions** - The wsdl:definitions element is the root element of a WSDL file and defines the name of the web service in addition to serving as a container for the other WSDL sections. Additionally, all namespaces used within the WSDL file are declared here.
- **Types** - The wsdl:types element describes all the data types used in the message request and response payload. The request and response message payloads for document literal services are defined in this section by referencing the appropriate XML schemas. The request and response payload are SOAP formatted XML messages. The HTE request payload contains a SOAP header which is also defined in this section.
- **Message** - The wsdl:message element describes a single request or response message. It defines the name of the message and contains three message part elements, representing SOAP header, request and response. The SOAP header, request and response messages are defined by referencing appropriate XML schema(s) from the wsdl:types section of the WSDL.
- **PortType** - The wsdl:portType element combines multiple wsdl:message elements to form a complete round-trip operation. A portType combines one request and one response message into a single request/response operation

Below is an example of an interface definition WSDL file.

```
<?xml version="1.0" encoding="UTF-8"?>
<wsdl:definitions xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/"
    xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
    xmlns:http="http://schemas.xmlsoap.org/wsdl/http/"
    xmlns:xs="http://www.w3.org/2001/XMLSchema"
    xmlns:ota="http://www.opentravel.org/OTA/2003/05 "
    xmlns:ns="http://schemas.xmlsoap.org/soap/encoding/"

    <!-- OTAHotelSearch is the single request/response operation that can be performed by the
        web service. The input and output messages that are involved are HotelSearchRequest and Ho-
        telSearchResponse -->
    <wsdl:operation name="OTAHotelSearch">
        <wsdl:input message="ota:HotelSearchRequest"/>
        <wsdl:output message="ota:HotelSearchResponse"/>
    </wsdl:operation>
</wsdl:portType>
</wsdl:definitions>

```

13.3.2 Binding Implementation WSDL file

This section describes the SOAP based binding implementation WSDL files. The binding implementation WSDL is a separate document referencing the interface definition WSDL. The referenced WSDL file should be imported as shown in the example below. It should be noted that the “import” element in this WSDL refers to the “WSDL” namespace rather than the “schema” namespace. The “import” element is explicitly qualified with a pre-defined ‘wsdl’ prefix.

13.3.2.1 Binding Implementation WSDL file components

The binding implementation WSDL file is comprised of the following parts

- **Binding** - The wsdl:binding element specifies how the service is implemented using SOAP. The WSDL recommendation includes built-in extensions for defining SOAP services. Therefore, SOAP-specific information is defined within the wsdl:binding element.
- **Service** - The wsdl:service element defines the Internet Protocol (IP) address for invoking the specified service. This includes a resolvable URL for invoking the service.

Below is an example of a binding implementation WSDL file.

```

<?xml version="1.0" encoding="UTF-8"?>
<wsdl:definitions xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/"
    xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
    xmlns:http="http://schemas.xmlsoap.org/wsdl/http/" xmlns:xs="http://www.w3.org/2001/XMLSchema"
    xmlns:ota="http://www.opentravel.org/OTA/2003/05"
    xmlns:ns="http://schemas.xmlsoap.org/soap/encoding/" name="HotelSearchService"
    targetNamespace="http://www.opentravel.org/OTA/2003/05">

    <!-- Import Interface Definition WSDL file -->
    <wsdl:import namespace="http://www.opentravel.org/OTA/2003/05"
        location="OTAHotelSearchInf.wsdl"/>

    <wsdl:binding name="HotelSearchBinding" type="ota:HotelSearchPortType">
        <!-- The binding technique used is SOAP -->

```

```
<soap:binding style="document" transport="http://schemas.xmlsoap.org/soap/http"/>
    <!-- The operation is document-oriented -->
    <wsdl:operation name="OTAHotelSearch">
        <soap:operation soapAction="OTA_HotelSearchRQ"/>
        <!-- "literal" is used to include OTA XML schema as is-->
        <wsdl:input>
            <!-- Soap Header to be added to the payload -->
            <soap:header message="ota:SoapHeader" part="Interface" use="literal"
namespace="http://www.opentravel.org/OTA/2003/05"/>
            <soap:body use="literal" namespace="http://www.opentravel.org/OTA/2003/05"/>
        </wsdl:input>
        <wsdl:output>
            <soap:body use="literal" namespace="http://www.opentravel.org/OTA/2003/05"/>
        </wsdl:output>
    </wsdl:operation>
</wsdl:binding>
<wsdl:service name="OTAHotelSearchService">
    <wsdl:port name="HotelSearchPort" binding="ota:HotelSearchBinding">
        <!-- Specifies the IP address for invoking the specified service -->
        <soap:address location="https://htestg.hilton.com:11201/ota/OTA.pl"/>
    </wsdl:port>
</wsdl:service>
</wsdl:definitions>
```

Appendix A. Constants

The following Hilton-specific constant values should be used. For OTA-specified constants, see the 2004B OTA specification code table. Hilton-specific constants are also available on our API Developer Hub: [Code Mappings | Hilton Dev Portal](#) for documentation

A.1 Hilton Payment/Guarantee Codes	
PaymentCode	Description
FP	FULL PREPAYMENT NO CXL
CC	CREDIT CARD GUARANTEE
TA	GUARANTEE TO TRAVEL AGENT
CD	CREDIT CARD DEPOSIT
CO	GUARANTEE TO COMPANY (HCRS)
CR	GUARANTEE TO COMPANY (PCRS)
4P	4PM HOLD NOTE: Rarely used, and exception approval required. Not listed on the Developer Hub
6P	6PM HOLD NOTE: Rarely used, and exception approval required. Not listed on the Developer Hub

A.2 Hilton Brand Codes – Please refer to the [Code Mappings](#) page on the API Developer Portal for a list of current brand codes.

A.3 OTA Code List Error Warning Type (EWT) – 2004B Specification		
Code	Name	Description
1	Unknown	Indicates an unknown error
2	No implementation	Indicates that the target business system has no implementation for the intended request.
3	Biz rule	Indicates that the XML message has passed a low-level validation check, but that the business rules for the request message were not met.
4	Authentication	Indicates the message lacks adequate security credentials

A.3 OTA Code List Error Warning Type (EWT) – 2004B Specification

Code	Name	Description
5	Authentication timeout	Indicates that the security credentials in the message have expired
6	Authorization	Indicates the message lacks adequate security credentials
7	Protocol violation	Indicates that a request was sent within a message exchange that does not align to the message
8	Transaction model	Indicates that the target business system does not support the intended transaction-oriented operation
9	Authentical model	Indicates the type of authentication requested is not recognized
10	Required field missing	Indicates that an element or attribute that is required by the schema (or required by agreement between trading partners) is missing from the message

A.4 Hilton Meal Plan Codes – Please refer to the [Code Mappings](#) page on the API Developer Portal for a list of current meal plan codes.

A.5 Hilton Booking Codes

Code	Name	Description
BAR	Best Available Rate	This rate is the lowest published rate for the day or days associated with the stay for the room type selected at the property.
CORPORATE	Corporate Rate	Corporate rates are those rates that are available only to the specific company at the hotel for a specific room type. These may be static or floating depending on how the rate for the company has been configured for the specific hotel.
CHAINWIDE	Chainwide Rate	Client specific corporate booking discount.
LEISURE	Leisure Rate	Each brand has a specific set of leisure rates that are available to the general public. These rates may differ from BAR but will also have specific amenities or options associated with the rate - for example, free breakfast or a food and beverage credit.
MEMBERSHIP	Membership Rate	Typically this includes AAA and AARP rates only. Brands may choose to include additional rate plans in this category in the future.

A.5 Hilton Booking Codes

Code	Name	Description
ADV PURCHASE	Advance Purchase	Internet rates that require full pre-payment at time of booking. These rates may be lower than BAR but do not allow cancellation after booking.

A.6 Hilton Room Amenity Codes

Code	Name	Description	Usage
0	One Bed	Indicates that the room has one bed regardless of the bed type.	May be returned in HotelAvailRS but cannot be requested. Can be requested in HotelResRQ and HotelResModifyRQ.
1	Two Beds	Indicates that the room has two beds regardless of the bed type.	May be returned in HotelAvailRS but cannot be requested. Can be requested in HotelResRQ and HotelResModifyRQ.
2	Suite	Indicates the room is classified as a suite.	May be returned in HotelAvailRS but cannot be requested.
3	Executive	Indicates the room is classified as an executive room.	May be returned in HotelAvailRS but cannot be requested.
4	Towers	The location of the room is a tower in the hotel.	May be returned in HotelAvailRS but cannot be requested.
5	Accessible	The room is handicapped-accessible.	May be returned in HotelAvailRS but cannot be requested.
6	Smoking	Indicates the room is a smoking room.	Can be requested in HotelAvailRQ, HotelResRQ and HotelResModifyRQ.
7	Non-smoking	Indicates the room is a non-smoking room.	Can be requested in HotelAvailRQ, HotelResRQ and HotelResModifyRQ.
8	Meal Plan	Indicates there is a meal plan code associated with the room stay.	May be returned in HotelAvailRS but cannot be requested.
9	Extra Bed	This value can be sent in OTA_HotelAvailRQ to request for rooms that support a rollaway or crib.	Can be requested in HotelAvailRQ.
10	Rollaway	This value can be used in OTA_HotelResRQ to request for a rollaway.	Can be requested in HotelResRQ and HotelResModifyRQ.
11	Crib	This value can be used in OTA_HotelResRQ to request	Can be requested in HotelResRQ and HotelResModifyRQ.

		for a crib.	
12	First Floor	Room is located on the first floor.	May be returned in HotelAvailRS. Cannot be requested.
13	Extra Guest(s)	This room allows an extra guest(s).	May be returned in HotelAvailRS. Cannot be requested.
14	Connecting	Indicates a connecting room.	May be returned in HotelAvailRS. Cannot be requested.

A.7 Hilton Chain Code Vs. Brand Code Mapping – Please refer to the [Code Mappings](#) page on the API Developer Portal for a list of current brand code mappings.

Appendix B. References

The following documents and publications are referenced in this document:

SOAP 1.1 Specification <http://www.w3.org/TR/2000/NOTE-SOAP-20000508/>

HTTP 1.1 Status Codes <http://www.w3.org/Protocols/HTTP/HTRESP.html>

IATA codes <http://www.iata.org>

ISO 4217 Currency Codes <http://www.iso.org/iso4217.html>

OTA 2004B Specification <http://www.opentravel.org/2004B/>

XML 1.0 Specification <http://www.w3.org/TR/2004/REC-xml-20040204/>

Appendix C. Acronyms and Abbreviations

The following acronyms and abbreviations are used in this document:

HTE	Hilton Transaction Exchange
HTTP	HyperText Transfer Protocol
IATA	International Air Transportation Code
OTA	Open Travel Alliance
SOAP	Simple Object Access Protocol
TLS	Transport Layer Security
WSDL	Web Services Definition Language
XML	Extensible Markup Language
XSD	XML Schema Definition

Appendix D. Best Practices and Frequently Asked Questions (FAQ)

Listed below are best practices and some frequently asked questions regarding HTE errors, development, troubleshooting, and connectivity. Click on the question to go an answer.

- [My request times out.](#)
- [I am getting a “403 Forbidden” error.](#)
- [Why am I getting a handshake failure?](#)
- [Why am I getting no response from your server?](#)
- [I am getting a “connection is refused” message.](#)
- [I am getting a “certificate expired” message.](#)
- [Why I am getting a “certificate does not match” error.](#)
- [Why am I receiving a “no trusted certificate found” error?](#)
- [I still can’t connect to the Hilton server.](#)
- [My elements contain namespace prefixes and my transactions are failing. What do I do?](#)

Connectivity Error Messages – If you receive one or more of the following errors, please verify the IP address you are using is within the IP range that you originally provided us. Many times a client may undergo network changes during the development process and be attempting to use an IP address that has not been previously authenticated against the Hilton firewalls.

- Request timed out.
- Http status: 403 Forbidden.
- FaultString: javax.net.ssl.TLS HandshakeException. Received fatal alert: hand-shake_failure.
- There is no error or there is no response from our server or the connection is refused.

Verify with your network engineers that your IP addresses/proxy servers are allowing connection to Hilton on port 11201 only. In some instances, client networks have translated the https request to other incorrect ports, i.e. 80.

If you discover that your IP address is not within the range you provided to Hilton, please let us know immediately following the process noted on the Developer Portal Production Support page. Adding an IP range to Hilton firewalls typically takes 5 to 7 working days due to our stringent security policies.

Certificate Related Error Messages – HTE requires a signed Verisign certificate. If you encounter any of the errors below, please verify that a Verisign certificate has been loaded into your TLS library. See the Developer’s Guide, page 8, for additional information.

- Certificate Expired -or- Certificate Does Not Match
- sun.security.validator.ValidatorException: No trusted certificate found.

Additional Connectivity Test – If all the above problems have been ruled out or corrected, please perform the test(s) below. This test will help us determine if the issue is on your end or our end.

From your box do one of the following:

- wget <https://htestg.hilton.com:11201/ota/Canned.pl> (For HTE Canned)
- wget <https://htestg.hilton.com:11201/ota/OTA.pl> (For HTE Staging)
- wget <https://hte.hilton.com:11201/ota/OTA.pl> (For HTE Prod)

The correct response from us should be -

```
wget https://hte.hilton.com:11201/ota/OTA.pl
https://hte.hilton.com:11201/ota/OTA.pl
=> `OTA.pl'
Resolving hte.hilton.com... done.
Connecting to hte.hilton.com[192.251.124.81]:11201... connected.
HTTP request sent, awaiting response... 411 Length Required
ERROR 411: Length Required
```

If you get the following, please contact us immediately with the IP address from where you did the above test and date when you performed this test. This will help us research our firewall logs and analyze the issue.

```
wget https://hte.hilton.com:11201/ota/OTA.pl
https://hte.hilton.com:11201/ota/OTA.pl
=> `OTA.pl'
Resolving hte.hilton.com... done.
Connecting to hte.hilton.com[192.251.124.81]:11201... connected.

Unable to establish TLS connection
```

Element Prefixes – Some development tools will insert a namespace prefix such as “[:ns1](#)” or “[:element](#)” at the beginning of each element. HTE does not accept any leading element prefixes. Some of our clients have found helpful information regarding namespace prefixes at this Java Forum location: <http://forum.java.sun.com/thread.jspa?threadID=697876&tstart=75>

Appendix E. HTE Incident Tracking Form

No longer used.

Appendix F. HTE Transaction Errors

Please refer to the [Error Reference Guide](#) on the API Developer Portal.

Appendix G. Version 3.0 Developers Guide Record of Changes

G.1 Reelase Version 4.0 Updates – June 2023

Updated title page to clarify this is the HTE2 guide.

Removed the brand code table and added reference to the Dev Portal. Same for Error codes.

Removed HTE Support email and added link to Dev Portal Production Support page.

Addressed all comments from prior version.

Removed “Hilton Proprietary and Confidential Materials” footer as this file is designed to be shared with partners.

G.2 Release Version 3.0 Updates

- **Title page and footnote**
 - Updated Hilton logo and brand images on title page. (11-3-17)
 - Updated Hilton name and date on footnote. (11-3-17)
- **Chapter 1 – Introduction**
 - Updated Technical Support information to include after hours instructions and phone numbers. (11-6-17)
- **Chapter 2 – Messaging Protocol**
 - Corrected the SOAP example in Section 2.3. (5-21-08)
 - Updated Section 2.5 to reflect current security protocol to Transport Layer Security (TLS). (02-21-17)
- **Chapter 4**
 - Added reference to Appendix F Error Messages to section 4.12 (9-20-16)
- **Chapter 5 - OTA_HotelSearch**
 - Updated HotelSearchRQ examples with correct date format.
 - Changed the value in the Occurs column for element Property in the OTA_HotelSearchRS Elements and Attributes table.
 - Updated HotelSearchRS examples with correct date format. Corrected Warning attribute format.
- **Chapter 6 - OTA_HotelAvail**
 - Changed the value in the Occurs column for element Warning in the OTA_HotelAvailRS Elements and Attributes table.
 - Changed the value in the Occurs and Required column for element PaymentPolicies in the OTA_HotelAvailRS Elements and Attributes table.
 - Changed the value in the Occurs column for element Tax in the OTA_HotelAvailRS Elements and Attributes table.
 - Update all the OTA_HotelAvailRS examples.

- Corrected the RateMode values in OTA_HotelAvailRS Elements and Attributes table. (5-21-08)
 - Corrected Comments for AdditionalGuestAmounts element in Table 9. (7-09-08)
 - Added note about meal plan not being returned in a multi prop response. (7-09-13)
 - Expanded definition of AmountBeforeTax and AmountAfterTax. (8-4-21)
- **Chapter 7 - OTA_HotelRes**
 - Updated OTA_HotelResRQ example 1.
 - Changed the value in the Occurs column for element Tax in the OTA_HotelResRS Elements and Attributes table.
 - Changed the value in the Occurs and Required column for element Guarantee in the OTA_HotelResRS Elements and Attributes table.
 - Changed the value in the Required column for attribute ResID_Type in the OTA_HotelResRS Elements and Attributes table.
 - Updated comment for CardCode attribute in ResRQ: changed Table 12 to Table 11. Added uppercase comment. (10-14-10)
 - Removed comments regarding Initiate from RQ and RS. (Oct 2012)
 - Added max character limit to GivenName, SurName, and AddressLine.
 - Secured credit card number. (Mar 2016)
 - Expanded definition of AmountBeforeTax and AmountAfterTax. (8-4-21)
- **Chapter 8 - OTA_HotelResModify**
 - Updated OTA_HotelResModifyRQ example 1.
 - Changed the value in the Occurs column for element Tax in the OTA_HotelResModifyRS Elements and Attributes table.
 - Secured credit card number. (Mar 2016)
 - Expanded definition of AmountBeforeTax and AmountAfterTax. (8-4-21)
- **Chapter 10 - OTA_Cancel**
 - Removed the line “If you need to cancel a ‘segement’ of a reservation....” since in HTE 3.0 only one room can be booked per OTA_HotelRes transaction.
 - Added additional information regarding the correct use of the UniqueID ID attribute in the OTA_CancelRQ Elements and Attributes table. (5-21-08)
- **Chapter 11 - OTA_HotelDescriptiveInfo**
 - Added the element HotelInfo->CategoryCodes (01-24-12)
- **Appendix E**
 - Deleted the imbedded incident form and inserted it as an attachment to the PDF file.

- **Appendix F**
 - Added “HTE Transaction Errors” as Appendix F (09-20-16)
 - Updated. (10-27-16)
 - Updated. (11-15-16)
 - Updated. (10-10-18)
- **Appendix G**
 - Record of Changes moved from Appendix F to Appendix G.
- **Table A.4 Hilton Meal Plan Codes**
 - Added note about meal plan not being returned in a multi prop response. (7-09-13)
 - Added meal plan “Q” – breakfast, lunch, and dinner. (12-10-13)
 - Added note about PCRS not using meal plan codes. (10-10-18)
 - Added “1 - American Breakfast” (04-06-21)
- **Table A.2 Hilton Brand Codes**
 - Added Home2 brand. (2-14-14)
 - Added Curio and Canopy brands. (10-31-14)
 - Added Tru brand. (09-15-16)
 - Added Tapestry brand. (11-14-17)
 - Added Motto and Signia brands. (3-14-19)
 - Added new brand OL. (9-19-19)
 - Removed table. (28 Jul 2022. Onika Huggins)
- **Table A.6 Hilton Amenity Codes**
 - Updated table; added Usage column; added back codes 12-14. (3-29-18)
- **Table A.7 Hilton Chain Code vs. Brand Code Mapping**
 - Added new brand HT. (4-29-13)
 - Added new brands QQ and UP. (3-22-18)
 - Added new brands UA and SA. (3-14-19)
 - Added new brand OL. (9-19-19)
 - Added brand names to this table. (28 Jul 2022. Onika Huggins)

EOD
